

West Nile Virus in Peel September 21 – 27, 2009

West Nile Virus Surveillance 2009	Week of September 21 – 27, 2009				Year to Date			
	Total	Brampton	Caledon	Mississauga	Total	Brampton	Caledon	Mississauga
WNV-Positive Mosquito Pools	0	0	0	0	4	0	0	4
Confirmed Human Cases	0	0	0	0	0	0	0	0

Surveillance

The adult mosquito surveillance program started on June 15. To date, 1,178 mosquito batches have been tested for WNV and four have tested positive. No mosquito batches tested positive this week.

Region of Peel–Public Health has responded to 289 stagnant water reports from Peel residents.

There have been no human cases of WNV reported in Peel.

Mosquito Reduction

The larviciding program started on June 15, 2009 and will continue until September 30, 2009. Larviciding involves applying environmentally friendly products to reduce mosquito larvae (immature mosquitoes) living in stagnant water. The products are applied to municipal catch basins and selected sites on public property.

The fourth and final round of roadside catch basin larviciding has been completed. The fourth round was indicated by a green dot on the catch basin grate.

Larviciding of catch basins in the green spaces of parks in Peel has also been completed. The treatment of surface water sites on public lands will continue until the end of September.

Public Education

The best way to avoid infection is to protect yourself against mosquitoes by:

- Avoiding areas with large numbers of mosquitoes
- Wearing light-coloured clothing, including long sleeves, long pants, socks and a hat whenever you are outdoors (even when you are in your backyard), especially at dusk and at dawn
- Using only those personal insect repellents that are registered for use in Canada and applying the repellent according to the manufacturer's directions

WNV in Ontario

There is one human case of WNV in Windsor-Essex County. To date, 14 batches of mosquitoes have tested positive, including five in Windsor-Essex County, four in the region of Peel, two in Toronto and one in each of Halton Region, Niagara Region and York Region. One horse tested positive in Haliburton.

WNV in Canada

To date, there have been seven human cases of WNV in Canada. British Columbia has reported two human cases, 10 positive mosquito batches and three WNV-positive horses. Alberta has reported two human cases. Saskatchewan has reported one human case and 11 WNV-positive mosquito batches. Manitoba has reported one human case and two WNV-positive mosquito batches. See above for Ontario's results.

WNV in United States

To date, there have been 345 human cases of WNV in the United States, including 55 in Texas, 51 in Colorado, 47 in California and 37 in Mississippi.

The Great Lake States reporting human cases or positive mosquitoes include:

Great Lake States	WNV-Positive Mosquito Batches	Confirmed Human Cases
Illinois	354	4
Indiana	110	3
Michigan	3	0
Minnesota	4	1
New York	83	1
Ohio	226	2
Pennsylvania	251	2
