

**Other Comments**

4. If R24 is confirmed as the preferred site, what do we need to consider when designing the site? What type of features would you like to see included?

5. Please provide any other comments that you feel are relevant to this study.

**Thank You!**

All comments collected will be included in the Environmental Study report documenting this project. Comments on this part of the project will be received until June 4, 2010. You can leave your comment sheets tonight or send them to:

### NEXT STEPS

Following this Open House, the Region will decide if they will move forward with the preferred site and route. If the preferred site and route are chosen, the next step (Phase 3) is the design of the water storage facility and the feedermain. In Phase 3, we will look at various design options, such as how to design the building, where to place it on the property and how to mitigate potential impacts to the natural, social and economic environment. The feedermain designs will include where to locate the feedermain within the road right of way, where to locate temporary construction staging areas, how to manage traffic, and how to cross creeks.

In Phase 3, we are proposing to keep you informed about:

- The decision made on the storage facility site and feedermain route; and
- The opportunities to review the proposed designs for the site and the feedermain and the mitigation of impacts prior to a final decision. At a minimum, you will be advised of the location of the documentation and how long you have to review it and provide comments. Locations will include the project website, municipal offices and libraries.

Regulatory agencies will be involved in this phase to ensure that the Region is meeting all local and provincial requirements.
