Subject: Limited Phase II Environmental Site Assessment
Former Orangeville Rail, Mississauga/Caledon/Brampton, Ontario
Project No.: 211-10139-00

WSP is pleased to present our finalized Limited Phase II Environmental Site Assessment report for the above-noted property. The report describes the interpreted environmental conditions at the property and addresses comments received by email on February 9 and March 4, 2022.

Thank you for the opportunity to provide our services.

Yours truly,

Christopher Johnston, M.A., P.Geo. (Limited), QP_{ESA}
Team Lead – Contaminated Lands, Toronto

Team Lead – Contaminated Lands, Toronto

WSP Canada Inc. ("WSP") prepared this report solely for the use of the intended recipient, Region of Peel, in accordance with the professional services agreement between the parties. In the event a contract has not been executed, the parties agree that the WSP General Terms for Consultant shall govern their business relationship which was provided to you prior to the preparation of this report.

The report is intended to be used in its entirety. No excerpts may be taken to be representative of the findings in the assessment.

The conclusions presented in this report are based on work performed by trained, professional and technical staff, in accordance with their reasonable interpretation of current and accepted engineering and scientific practices at the time the work was performed.

The content and opinions contained in the present report are based on the observations and/or information available to WSP at the time of preparation, using investigation techniques and engineering analysis methods consistent with those ordinarily exercised by WSP and other engineering/scientific practitioners working under similar conditions, and subject to the same time, financial and physical constraints applicable to this project.

WSP disclaims any obligation to update this report if, after the date of this report, any conditions appear to differ significantly from those presented in this report; however, WSP reserves the right to amend or supplement this report based on additional information, documentation or evidence.

WSP makes no other representations whatsoever concerning the legal significance of its findings.

The intended recipient is solely responsible for the disclosure of any information contained in this report. If a third party makes use of, relies on, or makes decisions in accordance with this report, said third party is solely responsible for such use, reliance or decisions. WSP does not accept responsibility for damages, if any, suffered by any third party as a result of decisions made or actions taken by said third party based on this report.

WSP has provided services to the intended recipient in accordance with the professional services agreement between the parties and in a manner consistent with that degree of care, skill and diligence normally provided by members of the same profession performing the same or comparable services in respect of projects of a similar nature in similar circumstances. It is understood and agreed by WSP and the recipient of this report that WSP provides no warranty, express or implied, of any kind. Without limiting the generality of the foregoing, it

is agreed and understood by WSP and the recipient of this report that WSP makes no representation or warranty whatsoever as to the sufficiency of its scope of work for the purpose sought by the recipient of this report.

In preparing this report, WSP has relied in good faith on information provided by others, as noted in the report. WSP has reasonably assumed that the information provided is correct and WSP is not responsible for the accuracy or completeness of such information.

Benchmark and elevations used in this report are primarily to establish relative elevation differences between the specific testing and/or sampling locations and should not be used for other purposes, such as grading, excavating, construction, planning, development, etc.

WSP disclaims any responsibility for consequential financial effects on transactions or property values, or requirements for follow-up actions /or costs.

Overall conditions can only be extrapolated to an undefined limited area around these testing and sampling locations. The conditions that WSP interprets to exist between testing and sampling points may differ from those that actually exist. The accuracy of any extrapolation and interpretation beyond the sampling locations will depend on natural conditions, the history of Site development and changes through construction and other activities. In addition, analysis has been carried out for the identified chemical and physical parameters only, and it should not be inferred that other chemical species or physical conditions are not present. WSP cannot warrant against undiscovered environmental liabilities or adverse impacts off-Site.

The original of this digital file will be kept by WSP for a period of not less than 10 years. As the digital file transmitted to the intended recipient is no longer under the control of WSP, its integrity cannot be assured. As such, WSP does not guarantee any modifications made to this digital file subsequent to its transmission to the intended recipient.

This limitations statement is considered an integral part of this report.

VOC	volatile organic compound

1 EXECUTIVE SUMMARY

WSP Canada Inc. was retained by the Region of Peel to conduct a Limited Phase II Environmental Site Assessment (ESA) of the former Orangeville Rail, beginning in Streetsville, Mississauga, continuing through Brampton, and terminating in Orangeville, Ontario (hereafter referred to as the "Phase II Property" or "Site"). It is WSP's understanding that this Phase II ESA was completed for due diligence purposes prior to a potential property transaction. This report considers elements of Ontario Regulation 153/04 but does not fulfill the prescribed reporting requirements under Schedule E. There is no current requirement identified for a Record of Site Condition (RSC) to be filed. Section 13 (1) of O. Reg. 153/04 provides an exemption for the change in use of a property from a railway line to a trail used for recreational activities, negating the need for an RSC.

The Site begins in Mississauga, continues through Brampton, and terminates in Orangeville, Ontario running through mixed commercial, residential, agricultural, and industrial areas. The Site is comprised of a single-track railroad right-of-way, approximately 55 km in length and 19.8 m in width. The Site was developed as a passenger/freight railroad track beginning in the 1860s. The Site historically included one (1) rail yard, located in Brampton, and eight (8) smaller junctions where CP Rail station buildings were historically located. These stations or junctions included: Churchville, Snelgrove, Cheltenham, Inglewood, Forks of the Credit, Cataract, Alton, and Melville. It is noted that historic underground and aboveground fuel storage tanks have been identified in the vicinity of Mayfield Road (Snelgrove Junction). Records reviewed indicate that these historic tanks have been removed, dating back to at least 1999. This area was investigated in this Limited Phase II ESA through investigation location BH21-25.

The Site is irregular in shape and occupies an area of approximately 125.5 ha (310 acres). The Site is currently used as a railway. The Site is proposed to be converted into a multi-purpose recreational trail.

The Contaminant Overview Study (COS) completed by WSP in June 2020 identified multiple on-Site and off-Site potentially contaminating activities (PCAs) that resulted in the identification of 113 areas of potential environmental concern (APECs). WSP notes that only select APECs (Forty (40)) were investigated as part of this Limited Phase II ESA at the authorization of the Client. APECs were selected to achieve as much geographical coverage as possible. The Limited Phase II ESA conducted by WSP involved the advancement of 45 boreholes and installation of 18 shallow-screened groundwater monitoring wells to investigate soil and (shallow and overburden) groundwater conditions across the Site.

Based on the Limited Phase II ESA, WSP presents the following conclusions and recommendations:

- There were no investigation locations (soil or groundwater) that reported concentrations / values in excess of the MECP Table 1 SCS within the Mississauga footprint of the Site. Therefore, no further assessment is considered warranted at this time within the Mississauga footprint of the Site.
- Three (3) soil samples collected within the Brampton footprint of the Site at a depth interval of 0.0 to 0.6 mgbs (BH21-7 SS1, BH21-8 SS1 and BH21-45 SS1) did not meet the applicable MECP Table 1 SCS for PAHs. Additional evaluation through Due Diligence Risk Assessment (DDRA) is recommended.

- Two (2) soil samples collected within the Brampton footprint of the Site at a depth interval of 0.0 to 0.6 mbgs (BH21-16 SS1 and BH21-20 SS1) did not meet the applicable MECP Table 1 SCS for metals. Additional evaluation through DDRA is recommended.
- One (1) soil sample collected within the Brampton footprint of the Site at a depth interval of 7.6 to 8.2 mbgs (BH21-45 SS8) did not meet the applicable Table 1 SCS for PHCs (F1) and BTEX (ethylbenzene and xylenes). Additional evaluation through DDRA is recommended.
- Shallow groundwater quality within the Brampton footprint of the Site did not meet the MECP Table 1 SCS as of December 7, 2021. In particular, contaminant exceedances were identified at BH21-6 (cobalt and chromium; WSP notes that elevated chloride at BH21-6 does not warrant further assessment per Section 49.1 of O. Reg. 153/04 as the standard is considered met), BH21-16 (molybdenum) and BH 21-45 (molybdenum and PAHs). At the request of the Client, resampling of BH21-16 (molybdenum) and BH21-45 (molybdenum and PAHs) was undertaken on February 11, 2022, using low-flow sampling techniques. Molybdenum was detected in both confirmatory samples from BH21-16 and BH21-45 at concentrations greater than the Table 1 SCS. PAHs were not detected in the confirmatory sample from BH21-45. It is therefore inferred that the PAHs measured in the original groundwater sample from BH21-45 may have been influenced by sediment in the sample and may not be representative of the groundwater quality in this monitoring well. Additional evaluation through DDRA is recommended[1].
- The risk potential for off-Site adverse effects relative to any migration of molybdenum via groundwater transport relative to concentrations observed in shallow groundwater monitoring wells BH21-16 and BH21-45 is considered low. The molybdenum concentrations are inferred to be related to the presence of clayey soil. Further, the Table 2 and 8 SCS were both met.
- The risk potential for off-Site adverse effects relative to any migration of chromium via groundwater transport relative to the concentration observed in shallow groundwater monitoring well BH21-6 is considered low. While there is insufficient information to draw conclusions on the nature (anthropogenic vs. naturally occurring) of this contaminant in shallow groundwater, the Table 2 and 8 SCS were both met.
- The risk potential for off-Site adverse effects relative to any migration of cobalt via groundwater transport relative to the concentration observed in shallow groundwater monitoring well BH21-6 is increased relative to molybdenum and/or chromium concentrations identified at BH21-6, BH21-6 and/or BH21-45 on the basis that the Table 2 and 8 SCS were not met. Additional evaluation through DDRA is recommended.
- Four (4) soil samples collected within the Caledon footprint of the Site at depth intervals of 0.0 to 0.6 mbgs (BH21-10 S1, BH21-32 SS1 and BH21-36 SS1) and 0.6 to 1.2 mbgs (BH21-41 S2) did not meet the applicable MECP Table 1 SCS for metals and/or mercury. Additional evaluation through DDRA is recommended.
- Two (2) soil samples collected within the Caledon footprint of the Site at depth intervals of 1.5 to 2.1 mbgs (BH21-9 SS3) and 1.2 to 1.8 mbgs (BH21-40 S3) did not meet the applicable MECP Table 1 SCS for PAHs. Additional evaluation through DDRA is recommended.

[1] The Brampton DDRA maintained a conservative approach and considered the PAH concentrations in the original groundwater sample from BH21-45 as a worst-case scenario.

- Two (2) soil samples collected within the Caledon footprint of the Site at depth intervals of 0.6 to 1.2 mbgs (BH21-31 S2) and 0.0 to 0.6 mbgs (BH21-41 S1) did not meet the applicable MECP Table 1 SCS for PHCs (F2; BH21-31 S2) or BTEX (xylenes; BH21-41 S1). Additional evaluation through DDRA is recommended.
- As an alternative to implementation of risk management measures within the Caledon footprint of the Site, the Client could consider additional assessment (to further characterize lateral and vertical extents of impact) and subsequent implementation of excavation and disposal of impacted soil identified at BH21-10, BH21-41 and BH21-36. Confirmatory soil sampling and testing would be required to confirm the appropriateness of remedial excavation limits.
- Once the groundwater wells are no longer required for monitoring or sampling purposes, these wells are recommended to be appropriately decommissioned by a licensed well contractor as required by O. Reg. 903.

2 INTRODUCTION

WSP Canada Inc. was retained by the Region of Peel to conduct a Limited Phase II Environmental Site Assessment (ESA) of the former Orangeville Rail, beginning in Streetsville, Mississauga, continuing through Brampton, and terminating in Orangeville, Ontario (hereafter referred to as the "Phase II Property" or "Site"). It is WSP's understanding that this Phase II ESA was completed for due diligence purposes prior to a potential property transaction. This report considers elements of Ontario Regulation 153/04 but does not fulfill the prescribed reporting requirements under Schedule E. There is no current requirement identified for a Record of Site Condition (RSC) to be filed. Section 13 (1) of O. Reg. 153/04 provides an exemption for the change in use of a property from a railway line to a trail used for recreational activities, negating the need for an RSC.

The Site is comprised of a single-track railroad right-of-way, approximately 55 km in length and 19.8 m in width. The Site was developed as a passenger/freight railroad track beginning in the 1860s. The Site historically included one (1) rail yard, located in Brampton, and eight (8) smaller junctions where CP Rail station buildings were historically located. These stations or junctions included: Churchville, Snelgrove, Cheltenham, Inglewood, Forks of the Credit, Cataract, Alton, and Melville.

For the purposes of this investigation, the Mississauga portion of the Site is defined as the southernmost section of the Property, between Atwood Lane and Highway 407. The Brampton portion of the Site is the length of railway between Highway 407 and Mayfield Road, and the Caledon portion runs between Mayfield Road north to Orangeville, between Townline and Dufferin Road 109.

2.1 SITE DESCRIPTION

Property information for the Site is provided in the table below:

Table 2.1 Property Information

CRITERION	DESCRIPTION
Municipal Address	No municipal address is associated with the Site.
Property Identification Numbers (PINs)	See WSP, 2020
Legal Description	Legal descriptions were not provided at the time of this investigation.

2.2 PROPERTY OWNERSHIP

Property ownership information for the Site is provided in the table below:

Table 2.2 Property Ownership Information

CRITERION	DESCRIPTION
Current Site Owner	Orangeville Railway Development Corporation (ORDC)
Region Representative	Mr. Ryan Grzesiak Region of Peel 2 Copper Road Brampton, Ontario L6T 4W5 Email: ryan.grzesiak@peelregion.ca

2.3 CURRENT AND PROPOSED FUTURE USES

The Site is currently utilized for industrial purposes as a railway. Proposed redevelopment of the Site for parkland use includes the conversion of the railway into a multi-purpose recreational trail.

2.4 APPLICABLE SITE CONDITION STANDARD

The Site as a whole, could incorporate the Table 1: Full Depth Background Site Condition Standards for residential /parkland / institutional / industrial / commercial / community (RPIICC) property use (soil) and all types of property use (groundwater), on the identified basis of environmentally significant areas located within 30 metres (m) of boundaries. Further, portions of the Site could incorporate the Table 8: Generic Site Condition Standards for Use within 30 m of a Water Body in a Potable Ground Water Condition for RPIICC property use (soil) and all types of property use (groundwater), on the identified basis of water bodies within 30 m of property boundaries.

Additionally, portions of the Site could incorporate the Table 2: Full Depth Generic Site Condition Standards in a Potable Ground Water Condition for RPI property use (soil) and all types of property use (groundwater), in areas of the railway corridor that have not identified environmentally sensitive areas or water bodies within 30 m of property boundaries.

WSP notes that the majority of boreholes are not within 30 m of an environmentally significant area or a water body. As permission to use non-potable standards was not sought, the Table 2 SCS could be considered for assessment purposes. However, there are portions of the railway corridor footprint that are located within 30 m of an environmentally significant area and a water body. Therefore, for the purposes of this report, comparisons to Tables 1, 2 and 8 have been applied to our appended tables. Tables 1, 2 and 8 are set forth in the Ministry of the Environment, Conservation and Parks (MECP) 2011 publication *"Soil, Ground Water and Sediment Standards for Use under Part XV.1 of the Environmental Protection Act"*.

With regards to the 2011 MECP Table 8 Generic Site Condition Standard (SCS) for Use within 30 m of a Water Body in a Potable Groundwater Condition for RPIICC property uses, the selection of this standard for specific portions of the Phase II Property for comparison purposes was based on the following:

- Groundwater is used as a potable water source in the vicinity of the Phase II Property;
- The Phase II Property is not considered an "environmentally sensitive" site, as defined by O.Reg. 153/04;
- The future use of the Phase II Property is considered parkland land use (e.g., multi-use recreational trail);
- A water body is situated within 30 m of the specified portions of the Phase II Property;
- The pH of the soil samples analysed during this investigation from forty-four (44) boreholes ranged from 7.04 to 7.91, which falls within the acceptable range stated in O.Reg. 153/04; and,
- Bedrock was not encountered within 2 m of the ground surface.

With regards to the 2011 MECP Table 2 Full Depth Generic SCS in a Potable Groundwater Condition for RPI property use in course textured soils, the evaluation standard was selected for specific portions of the Phase II Property for comparison purposes based on the following:

- Groundwater is used as a potable water source in the vicinity of the Phase II Property;
- The Phase II Property is not considered an "environmentally sensitive" site, as defined by O.Reg. 153/04;
- The future use of the Phase II Property is considered parkland land use (e.g., multi-use recreational trail);
- The portions of the Site are not situated within 30 m of a water body; and,
- The pH of the soil samples analysed during this investigation from forty-four (44) boreholes ranged from 7.04 to 7.91, which falls within the acceptable range stated in O.Reg. 153/04; and,
- Bedrock was not encountered within 2 m of the ground surface.

Tables 1, 2, and 8 are set forth in the Ministry of the Environment, Conservation and Parks (MECP) 2011b publication "*Soil, Ground Water and Sediment Standards for Use under Part XV.1 of the Environmental Protection Act*".

3 BACKGROUND INFORMATION

3.1 PHYSICAL SETTING

A summary of the Site's physical setting determined through the COS is included in table below:

Table 3.1 Summary of Physical Setting

CRITERIA	DESCRIPTION
i. Water Bodies	The following water bodies were identified within the Phase II Study Area: — The Site intersects Levi's Creek just south of the 407 Express Toll Route; — The Site intersects an unnamed creek south of Old School Road; — An unnamed creek runs parallel to Site south of the Brampton Airport, east adjacent to Site; — The Site intersects the Credit River north of Olde Base Line Road; — The Site intersects Caledon Creek north of Queen Street East, Alton; and, — An unnamed creek runs parallel to Site south of Route 109, Orangeville.
ii. Areas of Natural Significance	The following areas of natural significance were identified within the Contaminant Overview Study Area: — The Meadowvale Conservation Area was listed as an area of natural significance within 1 km of Site; — The Churchville-Norval Wetland Complex was listed as an area of natural significance within 1 km of Site; — A portion of the Site traverses the Green Belt; — A portion of the Site traverses the Niagara Escarpment Plan Protection Area; — A portion of the Site traverses the Forks of the Credit Provincial Park; and, — A portion of the Site traverses the Caledon meltwater deposits.

iii.	Topography and surface water drainage features on the Phase II property	The Site ranges in elevation from approximately 174 masl in Churchville to 427 masl in Orangeville. The topography in the vicinity of the Site generally slopes to the southeast towards Lake Ontario. Based on the regional topography, the inferred shallow groundwater flow direction regional across the Site is southeast. The groundwater flow direction on the Site can only be confirmed through long-term groundwater monitoring. The Site is situated within bevelled till plains, sand plains, drumlinized till plains, escarpment, and spillway physiographic regions. The Site intersects several surficial geological areas; however, the surficial geology in vicinity of the majority of the Site is described as clay to silt textured till derived from glaciolacustrine deposits or shale. Additional surficial geological units located within the vicinity of the Site include modern alluvial deposits consisting of clay, silt, sand, and gravel (which may contain organic remains), fine glaciolacustrine deposits consisting of silt and clay, minor sand and gravel, interbedded silt and clay and gritty, pebbly flow till and rainout deposits, Paleozoic bedrock in the vicinity of Inglewood Junction, Ice-contact stratified deposits consisting of sand and gravel, minor silt, clay and till, glaciofluvial deposits consisting of river deposits and delta topset facies, and organic deposits consisting of peat, muck, and marl in the vicinity of the Forks of the Credit Junction, Alton Junction, and Melville Junction. The underlying bedrock within the area generally consists of shale, limestone, dolostone, and siltstone of the Queenston Formation in the southern portion of Site, and moves into sandstone, shale, dolostone, and siltstone of the Clinton, Cataract Group, and Amabel Formation once north of the Forks of the Credit.
iv.	Well-head protection areas or other designation	Part of the Caledon portion of the Site falls within a well-head protection area. Based on the MECP Source Protection Information Atlas, the following boreholes fall within this area: BH21-9, BH21-10, BH21-11, BH21-13, BH21-14, BH21-15, BH21-33, BH21-34, BH21-36, BH21-37 and BH21-38. The Mississauga and Brampton portions of the Site are not situated within a well-head protection area.
v.	Municipal drinking water system	Caledon: The Town of Caledon obtains its potable water primarily potable groundwater sources, as well as from Lake Ontario. No water supply wells were observed on the Site, and several domestic water wells were identified within the Study Area. A reportable spill of potable water was included in the ERIS Spill Database, as reported in the COS (WSP, 2020). This spill pertains to a release of potable drinking water from the Region of Peel's Snelgrove Elevated Tank (water storage tower) directly to a storm sewer for a period of 37 minutes on September 29, 2011. This spill is not considered an environmental concern to the subject site. Brampton: The City of Brampton obtains its potable water primarily from Lake Ontario and also from some potable groundwater sources. The municipality supplies water to properties within the Study Area. No water supply wells were observed on the Site, and several domestic water wells were identified within the Study Area. Mississauga: The municipality supplies water to properties within the Study Area, and the primary potable water source is Lake Ontario. The Site itself is not serviced for water.
vi.	Well observations	No potable water wells or monitoring wells were observed on the Site.

4 SCOPE OF INVESTIGATION

4.1 OVERVIEW OF SITE INVESTIGATION

The Phase II ESA involved intrusive investigation in the areas determined in the COS to be APECs. The Phase II ESA was carried out in accordance with O. Reg. 153/04. The Site investigation activities were limited to visible and accessible locations of the Site. Subsurface investigations, testing, sampling, and laboratory analyses were completed based on findings of the WSP COS, accessibility to APECs, and Site observations.

The Site investigation program included the following:

- Clearance of public and private underground utilities and services prior to commencement of intrusive investigation activities.
- Preparation of a Health and Safety Plan and safe execution of all proposed work.
- Advancement of forty-five (45) boreholes on the Phase II Property, to an approximate maximum depth of 9.1 mbgs. Boreholes less than 2 mbgs in depth were advanced manually using a hand auger. Boreholes greater than 2 mbgs were advanced using a track-mounted rig. The soil lithology from each borehole was logged in the field and samples were screened for hexane with a combustible gas detector. The locations of the boreholes were selected to investigate select APECs (forty ((40)) identified during the Contaminant Overview Study.
- Based on field screening and visual/olfactory observations, worst-case/representative soil samples from the boreholes were submitted for laboratory testing of relevant COPC.
- Groundwater monitoring wells were installed within eighteen (18) boreholes to assess groundwater quality below the Site and determine the direction of groundwater flow.
- The groundwater levels in the wells were measured to determine the groundwater table elevation. The wells were surveyed to a geodetic benchmark to determine groundwater flow direction.
- The groundwater wells were purged to remove stagnant water and sampled for laboratory testing of relevant parameters of concern.
- Both soil and groundwater samples were submitted for chemical analysis by a CALA certified laboratory.

5 INVESTIGATION METHOD

5.1 GENERAL

This section provides a brief description of all methods employed in undertaking the current Phase II ESA investigation. Where the method differs from the associated standard operating procedure, a detailed description of the method used and a rationale for the change in method is provided in the appropriate subsection below.

5.2 UTILITY LOCATES

Ontario One Call was contacted for the public utilities locates for the investigation. Premier Locates was retained by WSP to locate private utilities on-Site for all the subsurface investigation work.

5.3 DRILLING

WSP staff inspected the Site and identified the preferred borehole locations to provide general site coverage and investigate select APECs identified in the WSP COS. The borehole locations are shown on Figures 2-1 through 2-64. The location of underground services and utilities within the Site were cleared prior to the commencement of the drilling program. WSP arranged for the service locates to be completed through Ontario One Call and Landshark Locating Services. A summary of the drilling events is presented in the table below.

Table 5-1 Summary of Drilling

INFORMATION PARAMETER	DETAILS
Name of Drilling Contractor	Davis Drilling
Drilling Equipment Used	CME55 (track-mounted) – Boreholes greater than 1.8 mbgs Hand auger – Boreholes less than 1.8 mbgs
Measures taken to minimize the potential for cross-contamination	A 50-mm stainless steel split spoon sampler was used to collect soil samples from the boreholes. The split spoon sampler was brushed clean of soil, washed in municipal water containing phosphate free detergent, rinsed in municipal water, and then rinsed with distilled water for each sampling interval in order to reduce the potential for cross contamination. The hand auger was rinsed with distilled water between each sampling interval.
Frequency of sample collection	CME55: every 0.6 m per 0.8 m for the first 3.1 m followed by 0.6 m per 1.5 m to the termination of the borehole. Hand Auger: every 0.6 m up to 1.8 mbgs

From October 27 to December 6, 2021, a total of forty-five (45) boreholes were drilled along select areas of the Phase II Property. Hand-augered boreholes were advanced to a maximum depth of 1.8 mbgs. Soil samples were collected manually from the auger threads. Boreholes drilled with the CME55 were advanced to a maximum depth of 9.1 mbgs. Soil samples were collected from the fill and native material and the upper bedrock contact using a 50-mm diameter, 0.61-m long stainless-steel split spoon sampler.

5.4 SOIL

5.4.1 SOIL SAMPLING

Disposable nitrile gloves were used during sample collection and changed between each sample to minimize the potential for cross-contamination. Soil samples were described in the field by WSP staff and observations were recorded in a dedicated field book. Soil samples were collected directly into laboratory-supplied 120-mL glass jars and 40-mL methanol-preserved vials and were stored at a temperature of less than 10°C. Samples selected for laboratory analysis were handled under standard chain of custody procedures until received at the laboratory. The soil samples selected for laboratory analysis were considered representative of worst-case conditions in the boreholes based on field screening results and visual and olfactory observations.

All soil samples were submitted to AGAT Laboratories in Mississauga, Ontario. The soil samples submitted for chemical analysis are summarized in Table 2, appended.

5.4.2 FIELD SCREENING MEASUREMENTS

Soil samples collected from the boreholes were field screened for combustible gases using an RKI Eagle 2 CGD. In addition to visual and olfactory observations, the results of field screening were used to determine worst-case samples in order to select those to submit to the laboratory for analysis of volatile parameters. Additional samples may have been analysed for delineation purposes, if required. A summary of field screening measurements is provided in the table below.

Table 5-2 Summary of Field Screening Information

CRITERIA		DESCRIPTION
i.	Make and Model of Field Screening Instrument	RKI Eagle 2 CGD, Serial Number E2G087
ii.	Chemicals that Field Screening Instrument Detects and Respective Detection Limits	Combustible Gas (Hexane) with dynamic range of 0 to 50,000 parts per million (ppm)
iii.	Precision of the Measurements	1 ppm
iv.	Accuracy of the Measurements	50 ppm or ± 5% display reading
v.	Calibration Reference Standards	Hexane

vi.	Calibration Procedures	The RKI Eagle 2 was calibrated prior to use.

Field screening measurements (CGD readings) are discussed in Section 6.3.1.2 and presented on the finalized borehole logs, included in **Appendix A.**

5.5 GROUNDWATER

5.5.1 GROUNDWATER MONITORING AND WELL MODIFICATION

A total of eighteen (18) monitoring wells were installed by WSP between November 8, 2021 and February 11, 2022, along the length of the Phase II property. Two (2) wells were installed in Mississauga, eight (8) in Brampton and eight (8) in Caledon. The wells were installed and sampled for groundwater characterization purposes, based on COPCs identified in the COS.

Monitoring well construction details are provided in the borehole logs in **Appendix A.**

5.5.2 GROUNDWATER FIELD MEASUREMENT OF WATER QUALITY PARAMETERS

Between November 22 and December 2, 2021, all wells on Site were purged using 13 mm LDPE Waterra tubing and an inertial pump (foot valve). The wells were purged by removing three well volumes or by purging the well dry three times. Field measurements of water quality parameters were collected using a Hanna multi-meter as part of this assessment including field pH, EC, and temperature. Field groundwater quality measurements were obtained after the removal of each well volume and were recorded in a dedicated field book. This data has been archived and is available upon request.

5.5.3 GROUNDWATER SAMPLING

Between November 23 and December 7, 2021, following purging, groundwater samples were collected from all wells on Site for the purpose of assessing both shallow groundwater quality at the Phase II Property. Additional re-sampling of two (2) wells occurred on February 11, 2022, based on exceedances identified in the 2021 sampling event.

The groundwater samples were collected in laboratory-supplied bottles and stored in an ice-filled cooler and submitted under proper chain of custody procedures to AGAT Laboratories in Mississauga for analysis of metals and inorganics, PAHs, PHCs, PCBs, OCPs and VOCs.

5.6 SEDIMENT SAMPLING

Sediment sampling was not conducted as part of this Phase II ESA.

5.7 ANALYTICAL TESTING

Soil and groundwater samples were submitted to AGAT Laboratories in Mississauga, Ontario, for chemical analysis for the above listed parameters. AGAT Laboratories is certified by CALA.

5.8 RESIDUE MANAGEMENT PROCEDURES

The management of residues such as soil cuttings, purged groundwater and fluids from equipment cleaning was conducted as indicated in the table below.

Table 5.3 Summary of Residue Management Procedures

RESIDUE		MANAGEMENT PROCEDURE
i.	Soil cuttings from drilling and excavations	Soil cuttings were scattered in the vicinity of the boreholes.
ii.	Water from well development and purging	Groundwater from the development, purging and sampling of the monitoring wells was discharged down gradient, away from the monitoring wells.
iii.	Fluids from equipment cleaning.	Equipment cleaning water was emptied onto the ground down gradient of the wells.

5.9 ELEVATION SURVEY

The existing ground surface and top of pipe (well casing) elevations of the groundwater monitoring wells were surveyed by WSP personnel. The ground surface elevations are included on the borehole logs in **Appendix A**.

5.10 QUALITY ASSURANCE AND QUALITY CONTROL MEASURES

Sample containers were labelled with unique sample identification, the project number, and the sampling date. A laboratory-supplied chain of custody was completed for each laboratory submission; one copy was retained for the project file, while the remaining copy accompanied the samples to the laboratory.

Nitrile gloves, used during sample handling, were replaced after each sample was collected to reduce the potential for cross-contamination of the samples. Field equipment was decontaminated and rinsed with de-ionized water between samples.

As part of the quality assurance/quality control (QA/QC) program for the project, a minimum of one (1) blind field duplicate sample for every ten samples was collected and analyzed for each parameter group in both soil and groundwater. The relative percent difference (RPD) between duplicate samples was calculated in accordance with the *Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act as amended July 1, 2011* (i.e., 2011 Protocol). The calculated RPD was assessed against the recommended performance criteria outlined in the 2011 Protocol where the measured concentration was greater than 5 times the laboratory reportable detection limit (RDL).

AGAT Laboratories also performed QA/QC procedures as outlined in their CALA procedures. These procedures included analysis of lab duplicates and blanks as well as analysis of surrogate recovery as outlined in the Certificates of Analysis provided in **Appendix B.**

6 REVIEW AND EVALUATION

6.1 GEOLOGY/SOIL STRATIGRAPHY

A brief summary of the subsurface conditions encountered at the Site is presented below. Detailed borehole logs are included in **Appendix A.**

Mississauga:

The Mississauga portion of the Phase II Property is located within a Bevelled Till Plains physiographic region.

Boreholes BH21-1, BH21-12, BH21-42, BH21-43 and BH21-44 were advanced through an initial layer of sandy silt to a max depth of 1.22 mbgs, underlain by clayey silt to a max depth of 1.83 mbgs. In BH21-12, BH21-42, BH21-43 and BH21-44, this was underlain by silty clay to clay, ranging in depth from 0.76 to 9.75 mbgs. Bedrock was not encountered in this portion of the investigation, and is expected at depths greater than 7.3 mbgs based on available MECP well records.

Brampton:

The northern part of the Brampton portion of the Site and Study Area is located within a Drumlinized Till Plains physiographic region (BH21-18 through BH21-24). The southern part is located within a Bevelled Till Plains physiographic region (BH21-2 though BH21-8, BH21-16, BH21-17 and BH21-45).

BH21-45, BH21-16, BH21-2, BH21-22 and BH21-3 were advanced through a layer of sandy silt to a max depth of 6.1 mbgs, underlain by clay ranging between 1.52 to 9.75 mbgs. The clay was underlain by silty sand ranging between 7.9 and 9.14 mbgs. This was in turn underlain by red shale ranging from 6.20 mbgs to borehole termination. Shallow boreholes BH21-18 through BH21-21 were advanced through sandy silt up to 2.6 mbgs, underlain by red shale ranging from 1.2 mbgs to borehole termination. Shallow boreholes BH21-17, BH21-4, BH21-5, BH21-23 and BH21-24 were all advanced through sandy silt or silt to borehole termination. In BH21-6, sandy silt was encountered to 3.15 mbgs, and underlain by sand and pulverized rock to 6.20 mbgs, at which point red shale was encountered to borehole termination.

Caledon:

The portion of the Study Area north of (and including) BH21-31 is located within a Spillway physiographic region. The southern portion is located within a Drumlinized Till Plains physiographic region.

Boreholes BH21-11. BH21-13, BH21-25, BH21-28, BH21-30 and BH21-31 were advanced through sandy silt ranging from surface to 6.1 mbgs. This was underlain by sand and gravel in BH21-11 and BH21-13 ranging from 0.7 to 9.14 mbgs. Beneath the initial sandy silt, clay was encountered in BH21-25, BH21-28, BH21-30 and BH21-31 ranging in depths from 1.27 to 9.75 mbgs. Shallow boreholes BH21-14, BH21-15, BH21-26, BH21-27, BH21-29 and BH21-37 to BH21-40 were advanced through sandy silt or silty sand to borehole termination. Pulverized rock was encountered in BH21-30, BH21-36 and BH21-32 ranging between 6.45 mbgs and 9.45 mbgs.

Bedrock was not encountered in this portion of the investigation and is expected at depths greater than 23 mbgs based on MECP well records.

6.2 HYDROGEOLOGY

6.2.1 ELEVATIONS

The groundwater levels in the monitoring wells ranged from surface to 6.6 mbgs across the Site on December 7, 2021. Corresponding groundwater elevations ranged from 169.0 to 421.0 masl. Regional groundwater flow direction is to the south/southeast towards Lake Ontario.

The water levels and corresponding elevations are included in Table 1, appended to this report.

Neither LNAPL nor DNAPL were found to be present in any of the monitoring wells on the Site.

6.3 RESULTS OF ANALYSIS

The results of the laboratory analysis are discussed in the following sub-sections.

6.3.1 SOIL TEXTURE ANALYSIS

Coarse-fine grained SCS were used (for Table 2) as a measure as the soil types most consisted of sandy silt to silty sand.

6.3.2 FIELD SCREENING

During WSP's 2021 investigation, a total of 244 soil samples were screened for combustible gas concentrations using an RKI Eagle 2. The combustible gas concentrations ranged from 0 to 10 ppm. The combustible vapor readings are included on the borehole logs included in **Appendix A**. The samples that were submitted for laboratory analysis of organic parameters (VOCs, PHCs, PCBs, OCPs or PAHs) are indicated in the borehole logs provided in **Appendix A.**

6.3.3 SOIL CHEMICAL QUALITY

The soil analytical results are presented in Tables 4 through Table 8. The chemical exceedances in soil are presented in Figures 3, 4 and 5. Analytical results are separated by City (Mississauga (A) /Brampton (B) /Caledon (C).

The Laboratory Certificates of Analysis for the soil analysis are provided in **Appendix B.**

6.3.4 SOIL – METALS AND OTHER REGULATED PARAMETERS

A total of fifty-two (52) soil samples, including four (4) blind field duplicates for QA/QC purposes, were collected and submitted for analysis of metals and ORPs. The soil analytical results for VOCs are provided in Table 4 A/B/C.

Laboratory analysis indicated the following parameter exceedances of Table 1 SCS for metals and other regulated parameters (also shown in Figures 3-1 to 3-6):

Table 6.1 Summary of Metal & ORP Exceedances in Soil

SAMPLE ID	DEPTH (MBGS)	PARAMETER	UNITS	TABLE 1 SCS	TABLE 2 SCS	TABLE 8 SCS	ANALYTICAL RESULT	MUNICIPALITY
BH21-16 SS2	0.0 – 0.6	Antimony	µg/g	1.3	7.5	1.3	2.8	Brampton
		Molybdenum	µg/g	2	6.9	2	3.7	
		Zinc	µg/g	290	340	290	468	
BH21-20	0.0 – 0.6	Nickel	µg/g	1.5	100	82	142	
BH21-10 S1	0.0 – 0.6	Antimony	µg/g	1.3	7.5	1.3	3.5	Caledon

		Molybdenum	µg/g	2	6.9	2	11	
		Selenium	µg/g	1.5	2.4	1.5	2.1	
BH21-32 SS1	0.0 – 0.6	Antimony	µg/g	1.3	7.5	1.3	1.9	
		Mercury	µg/g	0.27	0.27	0.27	0.32	
BH21-36	0.0 – 0.6	Lead	µg/g	120	120	120	205	
BH21-41 S2	0.6 – 1.2	Arsenic	µg/g	18	18	18	26	
		Molybdenum	µg/g	2	6.9	2	2.1	

6.3.5 SOIL – PETROLEUM HYDROCARBONS AND BTEX

A total of forty-six (46) soil samples, including two (2) blind field duplicates for QA/QC purposes, were collected and submitted for analysis of PHCs and BTEX. The soil analytical results for VOCs are provided in Table 5 A/B/C.

Laboratory analysis indicated the following parameter exceedances of Table 1 SCS for PHCs and BTEX (also shown in Figures 5-1 to 5-3):

Table 6.2 Summary of PHC and BTEX exceedances in Soil

SAMPLE ID	DEPTH (MBGS)	PARAMETER	UNITS	TABLE 1 SCS	TABLE 2 SCS	TABLE 8 SCS	ANALYTICAL RESULT	MUNICIPALITY
BH21-45 SS8	7.6 – 8.2	Ethylbenzene	µg/g	0.05	1.1	0.05	0.9	Brampton
		Total Xylenes	µg/g	0.05	3.1	0.05	5.55	
		PHC F2	µg/g	10	98	10	51	
BH21-31 S2	0.6 – 1.2	PHC F2	µg/g	10	98	10	13	Caledon
BH21-41 S1	0.0 – 0.6	Total Xylenes	µg/g	0.05	3.1	0.05	0.22	

6.3.6 SOIL – VOLATILE ORGANIC COMPOUNDS

Twelve (12) soil samples were collected and submitted for analysis of VOCs.

The soil analytical results for VOCs are provided in Table 6 A/B/C and the results of the laboratory analyses indicated that all samples analysed met the applicable Table 1 SCS

6.3.7 SOIL – POLYCYCLIC AROMATIC HYDROCARBONS

A total of forty-six (46) soil samples, including four (4) blind field duplicates for QA/QC purposes, were collected and submitted for analysis of PAHs. The soil analytical results for VOCs are provided in Table 7 A/B/C.

Laboratory analysis indicated the following parameter exceedances of Table 1 SCS for PAHs (also shown in Figures 4-1 to 4-4):

Table 6.3 Summary of PAH Exceedances in Soil

SAMPLE ID	DEPTH (MBGS)	PARAMETER	UNITS	TABLE 1 SCS	TABLE 2 SCS	TABLE 8 SCS	ANALYTICAL RESULT	MUNICIPALITY
BH21-7 SS1	0.0 – 0.6	Anthracene	µg/g	0.16	0.67	0.22	0.18	Brampton
		Fluoranthene	µg/g	0.56	0.69	0.69	1.05	
		Benz(a)anthracene	µg/g	0.36	0.5	0.36	0.56	
		Benz(a)pyrene	µg/g	0.3	0.3	0.3	0.5	
		Benzo(b)fluoranthene	µg/g	0.47	0.78	0.47	0.6	
		Fluoranthene	µg/g	0.56	0.69	0.69	0.85	

BH21-8 SS1	0.0 – 0.6	Benz(a)anthracene	µg/g	0.36	0.5	0.36	0.46	
		Benz(a)pyrene	µg/g	0.3	0.3	0.3	0.4

BH21-45 SS1	0.0 – 0.6	Fluoranthene	µg/g	0.56	0.69	0.69	0.57	
		Benz(a)anthracene	µg/g	0.36	0.5	0.36	0.39	
		Benz(a)pyrene	µg/g	0.3	0.3	0.3	0.33	
BH21-9	1.5 – 2.1	Anthracene	µg/g	0.16	0.67	0.22	0.18	Caledon
BH21-40 S2	1.2 – 1.8	Naphthalene	µg/g	0.09	0.6	0.09	0.1	
		Benzo(b)fluoranthene	µg/g	0.47	0.78	0.47	0.53	
		Benzo(k)fluoranthene	µg/g	0.48	0.78	0.48	0.5	

6.3.8 SOIL – POLYCHLORINATED BIPHENYLS

Thirty-two (32) soil samples, including three (3) blind field duplicates for QA/QC purposes, were collected and submitted for analysis of PCBs. The soil analytical results for PCBs are provided in Table 8 A/B/C and the results of the laboratory analyses indicated that all samples analysed met the applicable Table 1 SCS.

6.3.9 SOIL – ORGANOCHLORINE PESTICIDES

Thirty-two (32) soil samples, including three (3) blind field duplicates for QA/QC purposes were collected and submitted for analysis of OCPs. The soil analytical results for OCPs are provided in Table 8 A/B/C and the results of the laboratory analyses indicated that all samples analysed met the applicable Table 1 SCS.

6.3.10 GROUNDWATER CHEMICAL QUALITY

The groundwater analytical results are presented in Tables 9 through 13. The chemical exceedances in groundwater are presented in Figures 6-1, 6-2 and 7-1. Chemical exceedances in groundwater were only identified in the **Brampton** portion of the Phase II Property. (For the tables, A – Mississauga, B – Brampton, C- Caledon).

The Laboratory Certificates of Analysis for the groundwater analysis completed during the present Phase II ESA are provided in **Appendix B.**

6.3.11 GROUNDWATER – METALS AND OTHER REGULATED PARAMETERS

A total of sixteen (16) groundwater samples were collected and submitted for analysis of metals and ORPs, including one (1) blind field duplicate for QA/QC purposes. BH21-16 and BH21-45 were

resampled for molybdenum only using low flow sampling in February 2022. The groundwater analytical results for metals and ORPs are provided in Table 9 A/B/C and the results of the laboratory analyses indicated the following exceedances of the Table 1 SCS (also shown in Figures 6-1 and 6-2):

Table 6.4 Summary of Metal and ORP exceedances in Groundwater

SAMPLE ID	SCREEN DEPTH (MBGS)	PARAMETER	UNITS	TABLE 1 SCS	TABLE 2 SCS	TABLE 8 SCS	DATE	ANALYTICAL RESULT
BH21-6	3.1 – 6.1	Chloride	µg/L	790000	790000	790000	06-Dec-21	**1460000**
		Chromium	µg/L	11	50	50		**25.3**
		Cobalt	µg/L	3.8	3.8	3.8		**4.53**
BH21-16	6.1 – 9.1	Molybdenum	µg/L	23	70	70	06-Dec-21	**24.7**
							11-Feb-22	**32.1**
BH21-45	6.1 – 9.1	Molybdenum	µg/L	23	70	70	01-Dec-21	**28**
							11-Feb-22	**57.1**

Exceedances were identified for chloride in BH21-6. The section 49.1 exemption under O. Reg. 153/04 is being applied by the Qualified Person on the basis that de-icing agents have been historically applied to surfaces on adjacent properties for the safety of vehicular or pedestrian traffic under conditions of snow or ice or both. On this basis, chloride is not considered as a COPC.

6.3.12 GROUNDWATER - PETROLEUM HYDROCARBONS AND BTEX

Nineteen (19) groundwater samples, including three (3) blind field duplicates for QA/QC purposes, were collected and submitted for the analysis of PHCs and BTEX during the present investigation.

The groundwater analytical results for PHCs are provided in Table 10 A/B/C and the results of the laboratory analyses indicated that all samples analysed met the applicable Table 1 SCS.

6.3.13 GROUNDWATER– VOLATILE ORGANIC COMPOUNDS

Twelve (12) groundwater samples, including two (2) blind field duplicates for QA/QC purposes, were collected and submitted for the analysis of VOCs during the present investigation.

The groundwater analytical results for VOCs are provided in Table 11 A/B/C and the results of the laboratory analyses indicated that all samples analysed met the applicable Table 1 SCS.

6.3.14 GROUNDWATER– POLYCYCLIC AROMATIC HYDROCARBONS

A total of sixteen (16) groundwater samples, including two (2) blind field duplicates for QA/QC purposes, were collected and submitted for analysis of PAHs. The groundwater analytical results for PAHs are provided in Table 12 A/B/C and the results of the laboratory analyses indicated the following

exceedances of the Table 1 SCS (also shown in Figure 7-1):

Table 6.5 Summary of PAH exceedances in Groundwater

SAMPLE ID	SCREEN DEPTH (MBGS)	PARAMETER	UNITS	TABLE 1 SCS	TABLE 2 SCS	TABLE 8 SCS	DATE	ANALYTICAL RESULT
BH21-45	6.1 – 9.1	Anthracene	µg/L	0.1	2.4	1	01-Dec-21	**1.79**
		Benz(a)anthracene	µg/L	0.2	1	1		**2.4**
		Benz(a)pyrene	µg/L	0.01	0.01	0.01		**3.67**
		Benzo(b)fluoranthene	µg/L	0.1	0.1	0.1		**4.92**
		Benzo(g,h,i)perylene	µg/L	0.2	0.2	0.2		**2.48**
		Benzo(k)fluoranthene	µg/L	0.1	0.1	0.1		**2.19**
		Chrysene	µg/L	0.1	0.1	0.1		**5.59**
		Dibenz(a,h)anthracene	µg/L	0.2	0.2	0.2		**0.32**
		Fluoranthene	µg/L	0.4	0.41	0.41		**17.9**
		Indeno(1,2,3-cd)pyrene	µg/L	2	0.2	0.2		**1.8**
		Phenanthrene	µg/L	0.1	1	1		**1.2**
		Pyrene	µg/L	0.2	4.1	4.1		**14.6**

6.3.15 GROUNDWATER– POLYCHLORINATED BIPHENYLS

Eight (8) groundwater samples, including one (1) blind field duplicate for QA/QC purposes, were collected and submitted for analysis of PCBs. The groundwater analytical results for PCBs are provided in Table 13 A/B/C and the results of the laboratory analyses indicated that all samples analysed met the applicable Table 1 SCS.

6.3.16 GROUNDWATER– ORGANOCHLORINE PESTICIDES

Three (3) groundwater samples were collected and submitted for analysis of OCPs. The groundwater analytical results for OCPs are provided in Table 13 A/B and the results of the laboratory analyses indicated that all samples analysed met the applicable Table 1 SCS.

6.3.17 SEDIMENT QUALITY

Sediment testing was not a part of this scope of work.

6.4 QUALITY ASSURANCE AND QUALITY CONTROL RESULTS

Ten (10) blind field duplicate soil samples were submitted for analysis. The calculated RPDs largely met the recommended performance criteria outlined in the 2011 Protocol, indicating acceptable correlation between samples. However, WSP notes that the nickel result in BH21-20 could not be reproduced by the laboratory within the accepted range of ≤ 30%. This result is attributed to sample heterogeneity and is not necessarily an indication on data reliability.

Four (4) blind field duplicate groundwater samples were collected. The calculated RPDs largely met the recommended performance criteria outlined in the 2011 Protocol, indicating acceptable correlation between samples. However, WSP notes that the PAH results in BH21-45 could not be reproduced within the accepted range of ≤ 30%, and metals could not be reproduced within the accepted range of ≤ 20%. These results may be attributed to sediment bias. Additional sampling via low flow technique is recommended to further assess the PAH presence identified in groundwater sampled from BH21-45.

Soil and groundwater duplicates with their parent samples and analyzed parameters are outlined in **Table 6.6.**

Three (3) trip blanks (distilled water samples), prepared by the laboratory, travelled along with the November and December 2021 groundwater samples and were analyzed by the laboratory for VOCs. The concentrations were below the RDL, indicating no contamination from the sample containers, preservatives, and transportation and storage conditions.

Table 6.6 Summary of QA/QC Results

DATE	MEDIA	SAMPLE ID	FIELD DUPLICATE ID	PARAMETERS	QA/QC RESULTS
28-Oct-21	Soil	BH21-34 S1	QAQC-1	PCBs, OCPs	All results were within the 2011 Protocol criteria for RPD
		BH21-34 S2	QAQC-2	Metals & ORPs	All results were within the 2011 Protocol criteria for RPD
8-Nov-21		BH21-28 SS1	QAQC-3	Metals & ORPs	All results were within the 2011 Protocol criteria for RPD
28-Oct-21		BH21-34 S3	QAQC-3b	PAHs	All results were within the 2011 Protocol criteria for RPD
8-Nov-21		BH21-28 SS2	QAQC-4	PHCs, BTEX	All results were within the 2011 Protocol criteria for RPD
8-Nov-21		BH21-28 SS3	QAQC-5	PAHs, PCBs, OCPs	All results were within the 2011 Protocol criteria for RPD

23-Nov-21		BH21-20 SS1	QAQC-6	Metals & ORPs	The results for nickel exceeded the RPD criteria for metals in soil; sample heterogeneity is attributed to the disparity on reproducibility. All other results were within the 2011 Protocol criteria for RPD*
		BH21-20 SS2	QAQC-7	PAHs, PCBs, OCPs	All results were within the 2011 Protocol criteria for RPD
		BH21-20 SS3	QAQC-8	PHCs, BTEX	All results were within the 2011 Protocol criteria for RPD
1-Dec-21		BH21-16 SS2	QAQC-10	PAHs	All results were within the 2011 Protocol criteria for RPD
2-Dec-21		BH21-3 SS1	QAQC-12	Metals & ORPs	All results were within the 2011 Protocol criteria for RPD
1-Dec-21	Groundwater	BH21-45	QA/QC	PAHs, PCBs, OCPs, Metals & ORPs, PHCs, VOCs	The following parameters exceed the RPD criteria for PAHs and metals. Sample heterogeneity is attributed to the disparity on reproducibility. All other results were within the 2011 Protocol criteria for RPD*
6-Dec-21		BH21-16	QAQC-1	VOCs	All results were within the 2011 Protocol criteria for RPD
6-Dec-21		BH21-6	QAQC-2	PHCs/BTEX	All results were within the 2011 Protocol criteria for RPD
2-Dec-21		BH21-8	QAQC-2b	PAHs	All results were within the 2011 Protocol criteria for RPD

* With regards to the reliability of the results of BH21-20 (soil) and BH21-45 (groundwater), the reported concentrations are assumed valid.

AGAT Laboratories carried out internal QA/QC measures including process recoveries, blanks, and replicate samples. The laboratory QA/QC results are provided on the Certificates of Analysis in **Appendix B**. The results were acceptable and therefore suitable for interpretation. The laboratory QA/QC results are provided on the Certificates of Analysis in **Appendix B**.

7 CONCLUSIONS & RECOMMENDATIONS

Based on the Limited Phase II ESA conducted by WSP, the following conclusions are set forth:

- There were no investigation locations (soil or groundwater) that reported concentrations / values in excess of the MECP Table 1 SCS within Mississauga footprint of the Site. Therefore, no further assessment is considered warranted at this time within the Mississauga footprint of the Site.
- Three (3) soil samples collected within the Brampton footprint of the Site at a depth interval of 0.0 to 0.6 mgbs (BH21-7 SS1, BH21-8 SS1 and BH21-45 SS1) did not meet the applicable MECP Table 1 SCS for PAHs. Additional evaluation through Due Diligence Risk Assessment (DDRA) is recommended.
- Two (2) soil samples collected within the Brampton footprint of the Site at a depth interval of 0.0 to 0.6 mbgs (BH21-16 SS1 and BH21-20 SS1) did not meet the applicable MECP Table 1 SCS for metals. Additional evaluation through DDRA is recommended.
- One (1) soil sample collected within the Brampton footprint of the Site at a depth interval of 7.6 to 8.2 mbgs (BH21-45 SS8) did not meet the applicable Table 1 SCS for PHCs (F1) and BTEX (ethylbenzene and xylenes). Additional evaluation through DDRA is recommended.
- Shallow groundwater quality within the Brampton footprint of the Site did not meet the MECP Table 1 SCS as of December 7, 2021. In particular, contaminant exceedances were identified at BH21-6 (cobalt and chromium; WSP notes that elevated chloride at BH21-6 does not warrant further assessment per Section 49.1 of O. Reg. 153/04 as the standard is considered met), BH21-16 (molybdenum) and BH 21-45 (molybdenum and PAHs). At the request of the Client, resampling of BH21-16 (molybdenum) and BH21-45 (molybdenum and PAHs) was undertaken on February 11, 2022, using low-flow sampling techniques. Molybdenum was detected in both confirmatory samples from BH21-16 and BH21-45 at concentrations greater than the Table 1 SCS. PAHs were not detected in the confirmatory sample from BH21-45. It is therefore inferred that the PAHs measured in the original groundwater sample from BH21-45 may have been influenced by sediment in the sample and may not be representative of the groundwater quality in this monitoring well. Additional evaluation through DDRA is recommended[2].
- The risk potential for off-Site adverse effects relative to any migration of molybdenum via groundwater transport relative to concentrations observed in shallow groundwater monitoring wells BH21-16 and BH21-45 is considered low. The molybdenum concentrations are inferred to be related to the presence of clayey soil. Further, the Table 2 and 8 SCS were both met.
- The risk potential for off-Site adverse effects relative to any migration of chromium via groundwater transport relative to the concentration observed in shallow groundwater monitoring well BH21-6 is considered low. While there is insufficient information to draw conclusions on the nature (anthropogenic vs. naturally occurring) of this contaminant in shallow groundwater, the Table 2 and 8 SCS were both met.
- The risk potential for off-Site adverse effects relative to any migration of cobalt via groundwater transport relative to the concentration observed in shallow groundwater monitoring well BH21-6 is

[2] The Brampton DDRA maintained a conservative approach and considered the PAH concentrations in the original groundwater sample from BH21-45 as a worst-case scenario.

increased relative to molybdenum and/or chromium concentrations identified at BH21-6, BH21-6 and/or BH21-45 on the basis that the Table 2 and 8 SCS were not met. Additional evaluation through DDRA is recommended.

- Four (4) soil samples collected within the Caledon footprint of the Site at depth intervals of 0.0 to 0.6 mbgs (BH21-10 S1, BH21-32 SS1 and BH21-36 SS1) and 0.6 to 1.2 mbgs (BH21-41 S2) did not meet the applicable MECP Table 1 SCS for metals and/or mercury. Additional evaluation through DDRA is recommended.
- Two (2) soil samples collected within the Caledon footprint of the Site at depth intervals of 1.5 to 2.1 mbgs (BH21-9 SS3) and 1.2 to 1.8 mbgs (BH21-40 S3) did not meet the applicable MECP Table 1 SCS for PAHs. Additional evaluation through DDRA is recommended.
- Two (2) soil samples collected within the Caledon footprint of the Site at depth intervals of 0.6 to 1.2 mbgs (BH21-31 S2) and 0.0 to 0.6 mbgs (BH21-41 S1) did not meet the applicable MECP Table 1 SCS for PHCs (F2; BH21-31 S2) or BTEX (xylenes; BH21-41 S1). Additional evaluation through DDRA is recommended.
- As an alternative to implementation of risk-management measures within the Caledon footprint of the Site, the Client could consider additional assessment (to further characterize lateral and vertical extents of impact) and subsequent implementation of excavation and disposal of impacted soil identified at BH21-10, BH21-41 and BH21-36. Confirmatory soil sampling and testing would be required to confirm the appropriateness of remedial excavation limits.
- Once the groundwater wells are no longer required for monitoring or sampling purposes, these wells are recommended to be appropriately decommissioned by a licensed well contractor as required by O. Reg. 903.

7.1 QUALIFIER

This assignment is limited to the completion of a Limited Phase II ESA and analysis of potential contamination at the selected borehole locations. This report is prepared for the Region of Peel's sole use in the evaluation of the former Orangeville Rail property in Mississauga, Brampton and Caledon.

The Limited Phase II ESA, sampling, and laboratory analyses were completed as documented in the report. Extrapolation of data beyond the borehole locations assumes that homogenous conditions exist beyond the sampling locations, which may not be the case. Therefore, it is not feasible to state conclusively, that the subsurface conditions encountered during this investigation exist beyond the sampled locations.

The conclusions provided in this report reflect our best judgment in light of the information available at the time of report preparation. Any use, which a third party makes of this report, or any reliance on or any decisions to be made based on it, is the responsibility of such third parties. WSP accepts no responsibility for damages, if any, suffered by any third party because of decisions or actions taken, based on this report. Conclusions documented in this report do not apply to other land uses. It is understood that Site conditions, environmental or otherwise, are not static and that this report documents Site conditions at the time of the investigation.

7.2 QUALIFICATIONS OF THE ASSESSORS

This report was prepared by Ms. Joanna West, GIT, who is currently an Environmental Scientist in the Toronto, Ontario office of WSP Canada Inc. She obtained an Honours Bachelor of Science degree in geology and a Master of Earth Sciences degree from the University of Toronto and has experience in conducting Phase One and Two ESAs on numerous residential, commercial, and industrial properties.

The conduct of this Limited Phase II ESA was supervised / reviewed by Mr. Christopher (Chris) Johnston, M.A., P.Geo. (Limited), QP_{ESA}, currently the Toronto Area Team Lead for Contaminated Lands for WSP Canada Inc. Chris is licenced by Professional Geoscientists Ontario to practice in environmental site assessment and remediation, including contaminant hydrogeology, and is a Qualified Person for Environmental Site Assessment under Ontario Regulation 153/04. With 23 years of experience, Chris has conducted and managed hundreds of environmental investigations including Phase One ESAs, Phase II ESAs, and various site remediation projects across Ontario.

Notes for Soil & Groundwater Summary Tables - Mississauga (A-series)

1. mbgs = metres below ground surface
2. ORPs = other regulated parameters
3. PHCs = petroleum hydrocarbons
4. VOCs = volatile organic compounds
5. PAHs = polycyclic aromatic hydrocarbons
7. APEC = area of potential environmental concern
6. - = parameter not analyzed
7. * = pH criteria for surface soils (0 - 1.5 mbgs) is 5 to 9, for subsurface soil (below 1.5 mbgs) is 5 to 11
8. Units for all soil analyses are in µg/g (ppm) unless otherwise indicated
9. Units for all groundwater analyses are in µg/L (ppb) unless otherwise indicated
10. Table 2 RPI CT = Full Depth Generic Site Condition Standards in a Potable Ground Water Condition with Coarse Textured Soils as contained in Table 2 of the Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act, published by the MECP on April 15, 2011
11. For soil and groundwater analytical results: **bold** = Concentration exceeds the 2011 MECP Table 2 SCS

Table 1A Monitoring Well Installation and Groundwater Levels

Monitoring Well ID			BH21-12	BH21-44
Installed By			WSP	WSP
Installation Date			18-Nov-21	17-Nov-21
Well Status			Active	Active

Notes for Soil & Groundwater Summary Tables - Mississauga (A-series)

1. mbgs = metres below ground surface
2. ORPs = other regulated parameters
3. PHCs = petroleum hydrocarbons
4. VOCs = volatile organic compounds
5. PAHs = polycyclic aromatic hydrocarbons
7. APEC = area of potential environmental concern
6. - = parameter not analyzed
7. * = pH criteria for surface soils (0 - 1.5 mbgs) is 5 to 9, for subsurface soil (below 1.5 mbgs) is 5 to 11
8. Units for all soil analyses are in µg/g (ppm) unless otherwise indicated
9. Units for all groundwater analyses are in µg/L (ppb) unless otherwise indicated
10. Table 8 RPIICC = Generic Site Condition Standards for Use within 30 m of a Water Body in a Potable Groundwater Condition as contained in Table 8 of the Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act, published by the MECP on April 15, 2011

11. For soil and groundwater analytical results: **bold** = Concentration exceeds the 2011 MECP Table 8 SCS

Table 1A Monitoring Well Installation and Groundwater Levels

Monitoring Well ID			BH21-12	BH21-44
Installed By			WSP	WSP
Installation Date			18-Nov-21	17-Nov-21
Well Status			Active	Active
Well Inner Diameter		(mm)	50	50
Casing Type (Flushmount / Monument)			Flushmount	Flushmount
Top of Pipe Elevation		(masl)	173.241	172.853
Ground Surface Elevation		(masl)	173.341	172.953
Bottom of Concrete Seal/Top of Bentonite Seal		(mbgs)	1.3	0.3
		(masl)	172.041	172.653
Bottom of Bentonite Seal/Top of Sand Pack		(mbgs)	1.6	1.6
		(masl)	171.8	171.4
Top of Well Screen		(mbgs)	2.2	2.2
		(masl)	171.1	170.8
Screen Length		(m)	3.0	3.0
Bottom of Screen		(mbgs)	5.2	5.2
		(masl)	168.2	167.8
22-Nov-21	Depth of GW	(mbgs)	4.3	1.6
	GW Elevation	(masl)	169.0	171.4
23-Nov-21	Depth of GW	(mbgs)	4.3	1.8
	GW Elevation	(masl)	169.0	171.2
7-Dec-21	Depth of GW	(mbgs)	4.3	1.5
	GW Elevation	(masl)	169.0	171.4

See "Notes for Soil and Groundwater Summary Tables" included at the beginning of this Section

Notes for Soil & Groundwater Summary Tables - Brampton (B-series)

1. mbgs = metres below ground surface
2. ORPs = other regulated parameters
3. PHCs = petroleum hydrocarbons
4. VOCs = volatile organic compounds
5. PAHs = polycyclic aromatic hydrocarbons
7. APEC = area of potential environmental concern
6. - = parameter not analyzed
7. * = pH criteria for surface soils (0 - 1.5 mbgs) is 5 to 9, for subsurface soil (below 1.5 mbgs) is 5 to 11
8. Units for all soil analyses are in µg/g (ppm) unless otherwise indicated
9. Units for all groundwater analyses are in µg/L (ppb) unless otherwise indicated
10. Table 1 RPIICC = Full Depth Background Site Condition Standards as contained in Table 1 of the Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act, published by the MECP on April 15, 2011
11. For soil and groundwater analytical results: **bold** = Concentration exceeds the 2011 MECP Table 1 SCS

Notes for Soil & Groundwater Summary Tables - Brampton (B-series)

1. mbgs = metres below ground surface
2. ORPs = other regulated parameters
3. PHCs = petroleum hydrocarbons
4. VOCs = volatile organic compounds
5. PAHs = polycyclic aromatic hydrocarbons
7. APEC = area of potential environmental concern
6. - = parameter not analyzed
7. * = pH criteria for surface soils (0 - 1.5 mbgs) is 5 to 9, for subsurface soil (below 1.5 mbgs) is 5 to 11
8. Units for all soil analyses are in µg/g (ppm) unless otherwise indicated
9. Units for all groundwater analyses are in µg/L (ppb) unless otherwise indicated
10. Table 2 RPI CT = Full Depth Generic Site Condition Standards in a Potable Ground Water Condition with Coarse Textured Soils as contained in Table 2 of the Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act, published by the MECP on April 15, 2011
11. For soil and groundwater analytical results: **bold** = Concentration exceeds the 2011 MECP Table 2 SCS

Notes for Soil & Groundwater Summary Tables - Brampton (B-series)

1. mbgs = metres below ground surface
2. ORPs = other regulated parameters
3. PHCs = petroleum hydrocarbons
4. VOCs = volatile organic compounds
5. PAHs = polycyclic aromatic hydrocarbons
7. APEC = area of potential environmental concern
6. - = parameter not analyzed
7. * = pH criteria for surface soils (0 - 1.5 mbgs) is 5 to 9, for subsurface soil (below 1.5 mbgs) is 5 to 11
8. Units for all soil analyses are in µg/g (ppm) unless otherwise indicated
9. Units for all groundwater analyses are in µg/L (ppb) unless otherwise indicated
10. Table 8 RPIICC = Generic Site Condition Standards for Use within 30 m of a Water Body in a Potable Groundwater Condition as contained in Table 8 of the Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act, published by the MECP on April 15, 2011
11. For soil and groundwater analytical results: **bold** = Concentration exceeds the 2011 MECP Table 8 SCS

Notes for Soil & Groundwater Summary Tables - Caledon (C-series)

1. mbgs = metres below ground surface
2. ORPs = other regulated parameters
3. PHCs = petroleum hydrocarbons
4. VOCs = volatile organic compounds
5. PAHs = polycyclic aromatic hydrocarbons
7. APEC = area of potential environmental concern
6. - = parameter not analyzed
7. * = pH criteria for surface soils (0 - 1.5 mbgs) is 5 to 9, for subsurface soil (below 1.5 mbgs) is 5 to 11
8. Units for all soil analyses are in µg/g (ppm) unless otherwise indicated
9. Units for all groundwater analyses are in µg/L (ppb) unless otherwise indicated
10. Table 1 RPIICC = Full Depth Background Site Condition Standards as contained in Table 1 of the Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act, published by the MECP on April 15, 2011
11. For soil and groundwater analytical results: **bold** = Concentration exceeds the 2011 MECP Table 1 SCS

See "Notes for Soil and Groundwater Summary Tables" included at the beginning of this Section

Notes for Soil & Groundwater Summary Tables - Caledon (C-series)

1. mbgs = metres below ground surface
2. ORPs = other regulated parameters
3. PHCs = petroleum hydrocarbons
4. VOCs = volatile organic compounds
5. PAHs = polycyclic aromatic hydrocarbons
7. APEC = area of potential environmental concern
6. - = parameter not analyzed
7. * = pH criteria for surface soils (0 - 1.5 mbgs) is 5 to 9, for subsurface soil (below 1.5 mbgs) is 5 to 11
8. Units for all soil analyses are in µg/g (ppm) unless otherwise indicated
9. Units for all groundwater analyses are in µg/L (ppb) unless otherwise indicated
10. Table 2 RPI CT = Full Depth Generic Site Condition Standards in a Potable Ground Water Condition with Coarse Textured Soils as contained in Table 2 of the Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act, published by the MECP on April 15, 2011
11. For soil and groundwater analytical results: **bold** = Concentration exceeds the 2011 MECP Table 2 SCS

See "Notes for Soil and Groundwater Summary Tables" included at the beginning of this Section

Notes for Soil & Groundwater Summary Tables - Caledon (C-series)

1. mbgs = metres below ground surface
2. ORPs = other regulated parameters
3. PHCs = petroleum hydrocarbons
4. VOCs = volatile organic compounds
5. PAHs = polycyclic aromatic hydrocarbons
7. APEC = area of potential environmental concern
6. - = parameter not analyzed
7. * = pH criteria for surface soils (0 - 1.5 mbgs) is 5 to 9, for subsurface soil (below 1.5 mbgs) is 5 to 11
8. Units for all soil analyses are in µg/g (ppm) unless otherwise indicated
9. Units for all groundwater analyses are in µg/L (ppb) unless otherwise indicated
10. Table 8 RPIICC = Generic Site Condition Standards for Use within 30 m of a Water Body in a Potable Groundwater Condition as contained in Table 8 of the Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act, published by the MECP on April 15, 2011
11. For soil and groundwater analytical results: **bold** = Concentration exceeds the 2011 MECP Table 8 SCS

POTENTIALLY CONTAMINATING ACTIVITIES (PCAS):

- (3) AIRSTRIPS AND HANGARS OPERATION
- (5) ASPHALT AND BITUMEN MANUFACTURING
- (8) CHEMICAL MANUFACTURING, PROCESSING AND BULK STORAGE
- (10) COMMERCIAL AUTOBODY SHOPS
- (12) CONCRETE, CEMENT AND LIME MANUFACTURING
- (14) CRUDE OIL REFINING, PROCESSING AND BULK STORAGE
- (19) ELECTRONIC AND COMPUTER EQUIPMENT MANUFACTURING
- (28) GASOLINE AND ASSOCIATED PRODUCTS STORAGE IN FIXED TANKS
- (30) IMPORTATION OF FILL MATERIAL OF UNKNOWN QUALITY
- (31) INK MANUFACTURING, PROCESSING AND BULK STORAGE
- (32) IRON AND STEEL MANUFACTURING AND PROCESSING
- (33) METAL TREATMENT, COATING, PLATING AND FINISHING
- (34) METAL FABRICATION
- (35) MINING, SMELTING AND REFINING; ORE PROCESSING; TAILINGS STORAGE
- (37) OPERATION OF DRY CLEANING EQUIPMENT (WHERE CHEMICALS ARE USED)
- (39) PAINTS MANUFACTURING, PROCESSING AND BULK STORAGE
- (40) PESTICIDES (INCLUDING HERBICIDES, FUNGICIDES AND ANTI-FOULING AGENTS) MANUFACTURING, PROCESSING, BULK STORAGE AND LARGE-SCALE APPLICATIONS
- (43) PLASTICS (INCLUDING FIBREGLASS) MANUFACTURING AND PROCESSING
- (45) PULP, PAPER AND PAPERBOARD MANUFACTURING AND PROCESSING
- (46) RAIL YARDS, TRACKS AND SPURS
- (47) RUBBER MANUFACTURING AND PROCESSING
- (50) SOAP AND DETERGENT MANUFACTURING, PROCESSING AND BULK STORAGE
- (51) SOLVENT MANUFACTURING, PROCESSING AND BULK STORAGE
- (53) TANNERY
- (54) TEXTILE MANUFACTURING AND PROCESSING
- (57) VEHICLES AND ASSOCIATED PARTS MANUFACTURING
- (58) WASTE DISPOSAL AND WASTE MANAGEMENT, INCLUDING THERMAL TREATMENT, LANDFILLING AND TRANSFER OF WASTE, OTHER THAN USE OF BIOSOILS AS SOIL CONDITIONERS
- (59) WOOD TREATING AND PRESERVATIVE FACILITY AND BULK STORAGE OF TREATED AND PRESERVED WOOD PRODUCTS
- (A) SPILLS
- (B) MISCELLANEOUS MANUFACTURING
- (C) COAL STORAGE
- (D) RAIL TIE PILE
- (E) PCB STORAGE
- (F) KNOWN CONTAMINATION

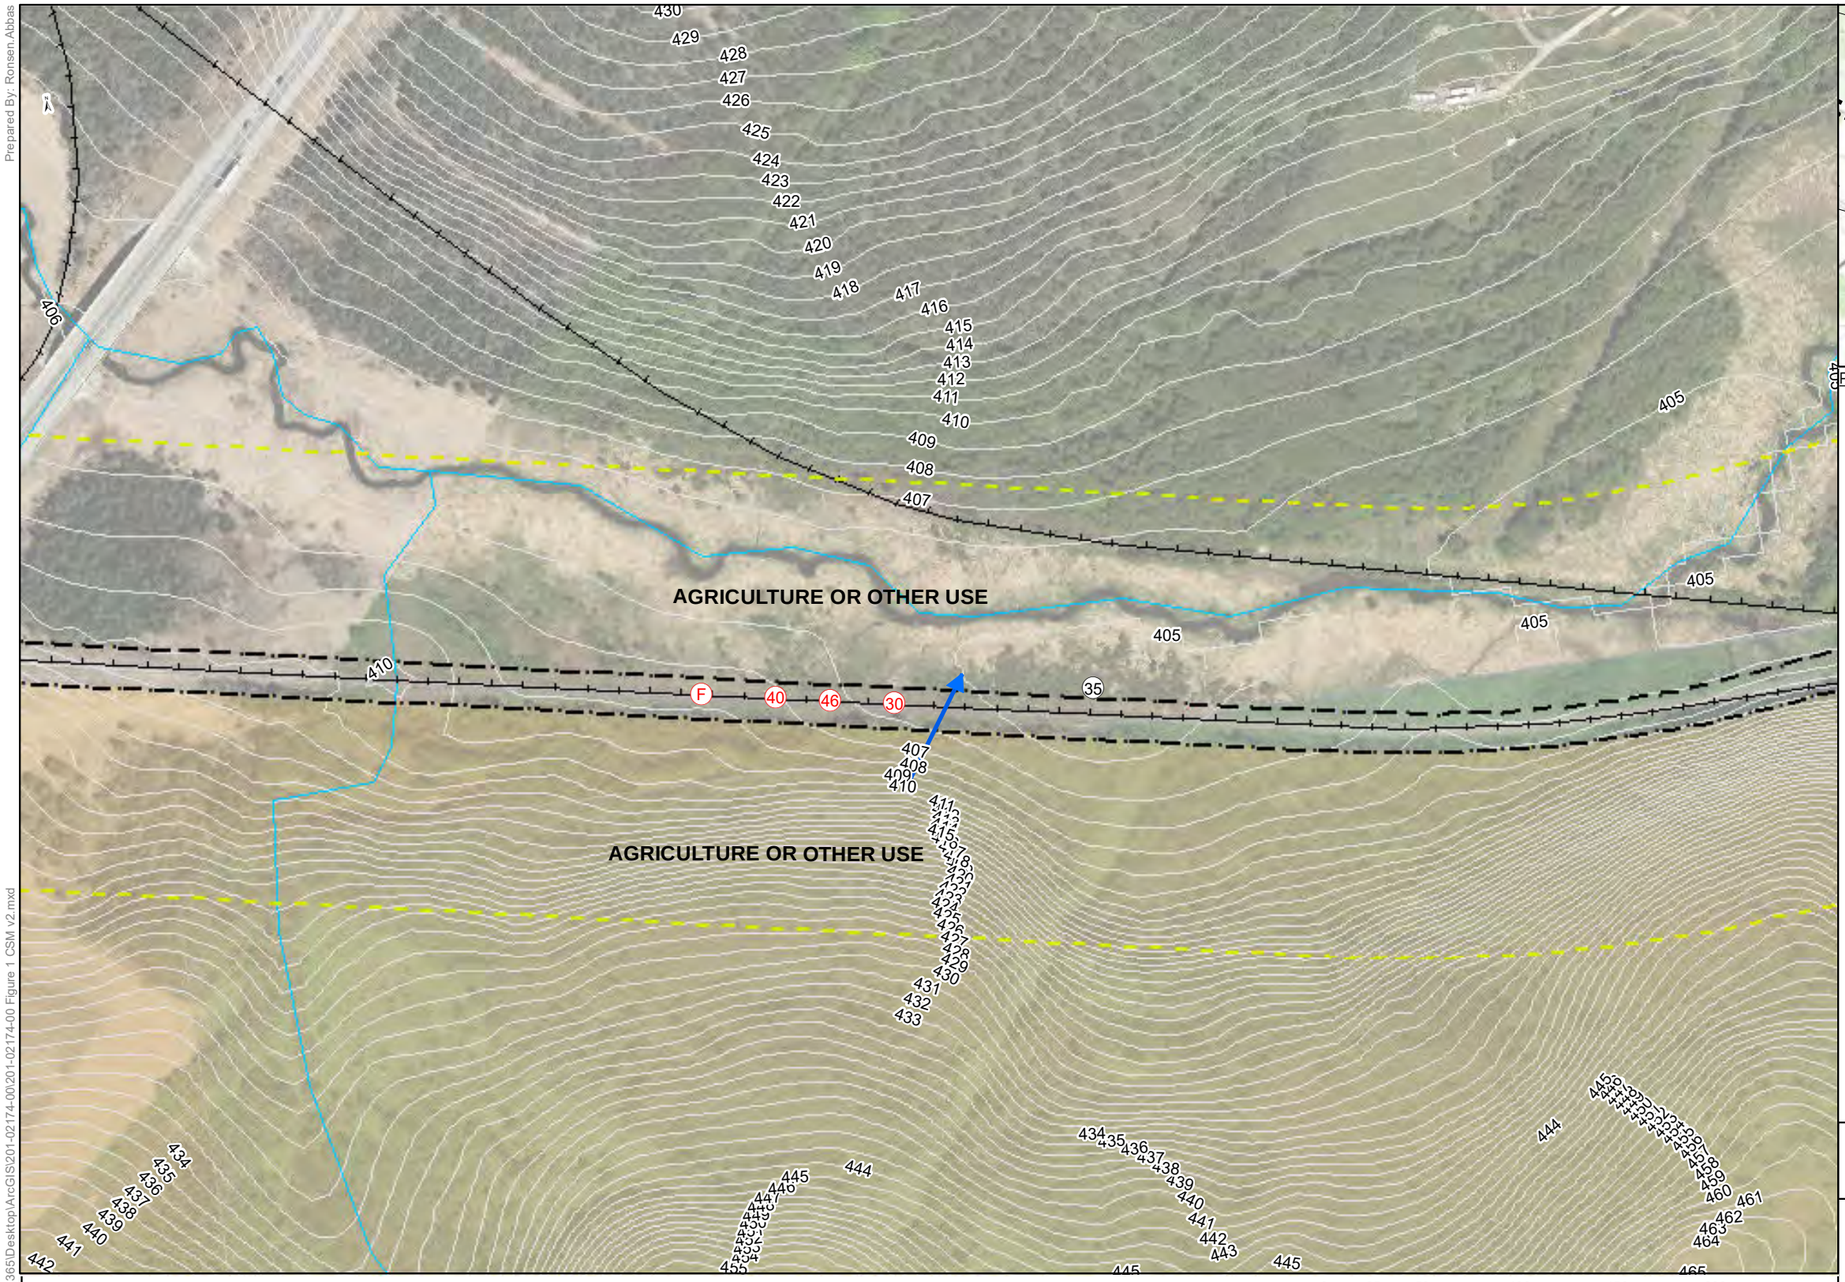
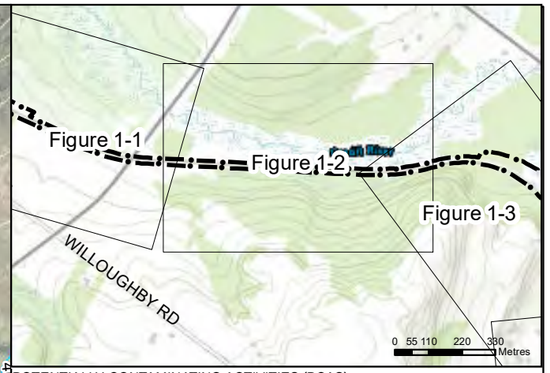
PROJECT:

CONTAMINANT OVERVIEW STUDY
FORMER ORANGEVILLE RAIL,
CALEDON, ONTARIO



CLIENT:



REGION OF PEEL

	PROJECT NO.: 201-02174-00	REVIEWED BY: MB
	DATE: MAY 2020	FIGURE: 1-24

Prepared By: Ronsen Abbas

C:\Users\ronsen.abbas\OneDrive - WSP O365\Desktop\ArcGIS\201-02174-00\201-02174-00 Figure 1 CSM v2.mxd

Prepared By: Ronsen Abbas

POTENTIALLY CONTAMINATING ACTIVITIES (PCAS):

- (3) AIRSTRIPS AND HANGARS OPERATION
- (5) ASPHALT AND BITUMEN MANUFACTURING
- (8) CHEMICAL MANUFACTURING, PROCESSING AND BULK STORAGE
- (10) COMMERCIAL AUTOBODY SHOPS
- (12) CONCRETE, CEMENT AND LIME MANUFACTURING
- (14) CRUDE OIL REFINING, PROCESSING AND BULK STORAGE
- (19) ELECTRONIC AND COMPUTER EQUIPMENT MANUFACTURING
- (28) GASOLINE AND ASSOCIATED PRODUCTS STORAGE IN FIXED TANKS
- (30) IMPORTATION OF FILL MATERIAL OF UNKNOWN QUALITY
- (31) INK MANUFACTURING, PROCESSING AND BULK STORAGE
- (32) IRON AND STEEL MANUFACTURING AND PROCESSING
- (33) METAL TREATMENT, COATING, PLATING AND FINISHING
- (34) METAL FABRICATION
- (35) MINING, SMELTING AND REFINING; ORE PROCESSING; TAILINGS STORAGE
- (37) OPERATION OF DRY CLEANING EQUIPMENT (WHERE CHEMICALS ARE USED)
- (39) PAINTS MANUFACTURING, PROCESSING AND BULK STORAGE
- (40) PESTICIDES (INCLUDING HERBICIDES, FUNGICIDES AND ANTI-FOULING AGENTS) MANUFACTURING, PROCESSING, BULK STORAGE AND LARGE-SCALE APPLICATIONS
- (43) PLASTICS (INCLUDING FIBREGLASS) MANUFACTURING AND PROCESSING
- (45) PULP, PAPER AND PAPERBOARD MANUFACTURING AND PROCESSING
- (46) RAIL YARDS, TRACKS AND SPURS
- (47) RUBBER MANUFACTURING AND PROCESSING
- (50) SOAP AND DETERGENT MANUFACTURING, PROCESSING AND BULK STORAGE
- (51) SOLVENT MANUFACTURING, PROCESSING AND BULK STORAGE
- (53) TANNERY
- (54) TEXTILE MANUFACTURING AND PROCESSING
- (57) VEHICLES AND ASSOCIATED PARTS MANUFACTURING
- (58) WASTE DISPOSAL AND WASTE MANAGEMENT, INCLUDING THERMAL TREATMENT, LANDFILLING AND TRANSFER OF WASTE, OTHER THAN USE OF BIOSOILS AS SOIL CONDITIONERS
- (59) WOOD TREATING AND PRESERVATIVE FACILITY AND BULK STORAGE OF TREATED AND PRESERVED WOOD PRODUCTS
- (A) SPILLS
- (B) MISCELLANEOUS MANUFACTURING
- (C) COAL STORAGE
- (D) RAIL TIE PILE
- (E) PCB STORAGE
- (F) KNOWN CONTAMINATION

POTENTIALLY CONTAMINATING ACTIVITIES (PCAS):

- (3) AIRSTRIPS AND HANGARS OPERATION
- (5) ASPHALT AND BITUMEN MANUFACTURING
- (8) CHEMICAL MANUFACTURING, PROCESSING AND BULK STORAGE
- (10) COMMERCIAL AUTOBODY SHOPS
- (12) CONCRETE, CEMENT AND LIME MANUFACTURING
- (14) CRUDE OIL REFINING, PROCESSING AND BULK STORAGE
- (19) ELECTRONIC AND COMPUTER EQUIPMENT MANUFACTURING
- (28) GASOLINE AND ASSOCIATED PRODUCTS STORAGE IN FIXED TANKS
- (30) IMPORTATION OF FILL MATERIAL OF UNKNOWN QUALITY
- (31) INK MANUFACTURING, PROCESSING AND BULK STORAGE
- (32) IRON AND STEEL MANUFACTURING AND PROCESSING
- (33) METAL TREATMENT, COATING, PLATING AND FINISHING
- (34) METAL FABRICATION
- (35) MINING, SMELTING AND REFINING; ORE PROCESSING; TAILINGS STORAGE
- (37) OPERATION OF DRY CLEANING EQUIPMENT (WHERE CHEMICALS ARE USED)
- (39) PAINTS MANUFACTURING, PROCESSING AND BULK STORAGE
- (40) PESTICIDES (INCLUDING HERBICIDES, FUNGICIDES AND ANTI-FOULING AGENTS) MANUFACTURING, PROCESSING, BULK STORAGE AND LARGE-SCALE APPLICATIONS
- (43) PLASTICS (INCLUDING FIBREGLASS) MANUFACTURING AND PROCESSING
- (45) PULP, PAPER AND PAPERBOARD MANUFACTURING AND PROCESSING
- (46) RAIL YARDS, TRACKS AND SPURS
- (47) RUBBER MANUFACTURING AND PROCESSING
- (50) SOAP AND DETERGENT MANUFACTURING, PROCESSING AND BULK STORAGE
- (51) SOLVENT MANUFACTURING, PROCESSING AND BULK STORAGE
- (53) TANNERY
- (54) TEXTILE MANUFACTURING AND PROCESSING
- (57) VEHICLES AND ASSOCIATED PARTS MANUFACTURING
- (58) WASTE DISPOSAL AND WASTE MANAGEMENT, INCLUDING THERMAL TREATMENT, LANDFILLING AND TRANSFER OF WASTE, OTHER THAN USE OF BIOSOILS AS SOIL CONDITIONERS

POTENTIALLY CONTAMINATING ACTIVITIES (PCAS):

- (3) AIRSTRIPS AND HANGARS OPERATION
- (5) ASPHALT AND BITUMEN MANUFACTURING
- (8) CHEMICAL MANUFACTURING, PROCESSING AND BULK STORAGE
- (10) COMMERCIAL AUTOBODY SHOPS
- (12) CONCRETE, CEMENT AND LIME MANUFACTURING
- (14) CRUDE OIL REFINING, PROCESSING AND BULK STORAGE
- (19) ELECTRONIC AND COMPUTER EQUIPMENT MANUFACTURING
- (28) GASOLINE AND ASSOCIATED PRODUCTS STORAGE IN FIXED TANKS
- (30) IMPORTATION OF FILL MATERIAL OF UNKNOWN QUALITY
- (31) INK MANUFACTURING, PROCESSING AND BULK STORAGE
- (32) IRON AND STEEL MANUFACTURING AND PROCESSING
- (33) METAL TREATMENT, COATING, PLATING AND FINISHING
- (34) METAL FABRICATION
- (35) MINING, SMELTING AND REFINING; ORE PROCESSING; TAILINGS STORAGE
- (37) OPERATION OF DRY CLEANING EQUIPMENT (WHERE CHEMICALS ARE USED)
- (39) PAINTS MANUFACTURING, PROCESSING AND BULK STORAGE
- (40) PESTICIDES (INCLUDING HERBICIDES, FUNGICIDES AND ANTI-FOULING AGENTS) MANUFACTURING, PROCESSING, BULK STORAGE AND LARGE-SCALE APPLICATIONS
- (43) PLASTICS (INCLUDING FIBREGLASS) MANUFACTURING AND PROCESSING
- (45) PULP, PAPER AND PAPERBOARD MANUFACTURING AND PROCESSING
- (46) RAIL YARDS, TRACKS AND SPURS
- (47) RUBBER MANUFACTURING AND PROCESSING
- (50) SOAP AND DETERGENT MANUFACTURING, PROCESSING AND BULK STORAGE
- (51) SOLVENT MANUFACTURING, PROCESSING AND BULK STORAGE
- (53) TANNERY
- (54) TEXTILE MANUFACTURING AND PROCESSING
- (57) VEHICLES AND ASSOCIATED PARTS MANUFACTURING
- (58) WASTE DISPOSAL AND WASTE MANAGEMENT, INCLUDING THERMAL TREATMENT, LANDFILLING AND TRANSFER OF WASTE, OTHER THAN USE OF BIOSOILS AS SOIL CONDITIONERS
- (59) WOOD TREATING AND PRESERVATIVE FACILITY AND BULK STORAGE OF TREATED AND PRESERVED WOOD PRODUCTS
- (A) SPILLS
- (B) MISCELLANEOUS MANUFACTURING
- (C) COAL STORAGE
- (D) RAIL TIE PILE
- (E) PCB STORAGE
- (F) KNOWN CONTAMINATION

POTENTIALLY CONTAMINATING ACTIVITIES (PCAS):

- (3) AIRSTRIPS AND HANGARS OPERATION
- (5) ASPHALT AND BITUMEN MANUFACTURING
- (8) CHEMICAL MANUFACTURING, PROCESSING AND BULK STORAGE
- (10) COMMERCIAL AUTOBODY SHOPS
- (12) CONCRETE, CEMENT AND LIME MANUFACTURING
- (14) CRUDE OIL REFINING, PROCESSING AND BULK STORAGE
- (19) ELECTRONIC AND COMPUTER EQUIPMENT MANUFACTURING
- (28) GASOLINE AND ASSOCIATED PRODUCTS STORAGE IN FIXED TANKS
- (30) IMPORTATION OF FILL MATERIAL OF UNKNOWN QUALITY
- (31) INK MANUFACTURING, PROCESSING AND BULK STORAGE
- (32) IRON AND STEEL MANUFACTURING AND PROCESSING
- (33) METAL TREATMENT, COATING, PLATING AND FINISHING
- (34) METAL FABRICATION
- (35) MINING, SMELTING AND REFINING; ORE PROCESSING; TAILINGS STORAGE
- (37) OPERATION OF DRY CLEANING EQUIPMENT (WHERE CHEMICALS ARE USED)
- (39) PAINTS MANUFACTURING, PROCESSING AND BULK STORAGE
- (40) PESTICIDES (INCLUDING HERBICIDES, FUNGICIDES AND ANTI-FOULING AGENTS) MANUFACTURING, PROCESSING, BULK STORAGE AND LARGE-SCALE APPLICATIONS
- (43) PLASTICS (INCLUDING FIBREGLASS) MANUFACTURING AND PROCESSING
- (45) PULP, PAPER AND PAPERBOARD MANUFACTURING AND PROCESSING
- (46) RAIL YARDS, TRACKS AND SPURS
- (47) RUBBER MANUFACTURING AND PROCESSING
- (50) SOAP AND DETERGENT MANUFACTURING, PROCESSING AND BULK STORAGE
- (51) SOLVENT MANUFACTURING, PROCESSING AND BULK STORAGE
- (53) TANNERY
- (54) TEXTILE MANUFACTURING AND PROCESSING
- (57) VEHICLES AND ASSOCIATED PARTS MANUFACTURING
- (58) WASTE DISPOSAL AND WASTE MANAGEMENT, INCLUDING THERMAL TREATMENT, LANDFILLING AND TRANSFER OF WASTE, OTHER THAN USE OF BIOSOILS AS SOIL CONDITIONERS
- (59) WOOD TREATING AND PRESERVATIVE FACILITY AND BULK STORAGE OF TREATED AND PRESERVED WOOD PRODUCTS
- (A) SPILLS
- (B) MISCELLANEOUS MANUFACTURING
- (C) COAL STORAGE
- (D) RAIL TIE PILE
- (E) PCB STORAGE
- (F) KNOWN CONTAMINATION

Sediment				No
Surrogate	Unit	Acceptable Limits		
Terphenyl	%	60-140		111

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3337872 The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and nC34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16 - C50 and are only determined if the chromatogram of the C34 - C50 Hydrocarbons indicated that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 2-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

O. Reg. 153(511) - Metals & Inorganics (Soil)

DATE RECEIVED: 2021-10-28

DATE REPORTED: 2021-11-08

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3146311-3146457 EC was determined on the DI water extract obtained from the 2:1 leaching procedure (2 parts DI water:1 part soil). pH was determined on the 0.01M CaCl2 extract prepared at 2:1 ratio. SAR is a calculated parameter.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3146319-3146456 Results are based on the dry weight of the soil.
DDT total is a calculated parameter. The calculated value is the sum of op'DDT and pp'DDT.
DDD total is a calculated parameter. The calculated value is the sum of op'DDD and pp'DDD.
DDE total is a calculated parameter. The calculated value is the sum of op'DDE and pp'DDE.
Endosulfan total is a calculated parameter. The calculated value is the sum of Endosulfan I and Endosulfan II.
Chlordane total is a calculated parameter. The calculated value is the sum of Alpha-Chlordane and Gamma-Chlordane.
PCB total is a calculated parameter. The calculated value is the sum of Aroclor 1242, Aroclor 1248, Aroclor 1254 and Aroclor 1260.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3146321-3146457 Results are based on the dry weight of the soil.
Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&j)Fluoranthene isomers because the isomers co-elute on the GC column.
2- and 1-Methyl Naphthalene is a calculated parameter. The calculated value is the sum of 2-Methyl Naphthalene and 1-Methyl Naphthalene.

Analysis performed at AGAT Toronto (unless marked by *)

Beryllium	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Boron	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Boron (Hot Water Soluble)	MET-93-6104	modified from EPA 6010D and MSA PART 3, CH 21	ICP/OES
Cadmium	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Chromium	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Cobalt	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Copper	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Lead	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Molybdenum	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Nickel	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Selenium	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Silver	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Thallium	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Uranium	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Vanadium	MET-93-6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Zinc	MET 93 -6103	modified from EPA 3050B and EPA 6020B and ON MOECC	ICP-MS
Chromium, Hexavalent	INOR-93-6068	modified from EPA 3060 and EPA 7196	SPECTROPHOTOMETER
Cyanide, Free	INOR-93-6052	modified from ON MOECC E3015, SM 4500-CN- I, G-387	TECHNICON AUTO ANALYZER
Mercury	MET-93-6103	modified from EPA 7471B and SM 3112 B	ICP-MS
Electrical Conductivity (2:1)	INOR-93-6036	modified from MSA PART 3, CH 14 and SM 2510 B	EC METER
Sodium Adsorption Ratio (2:1) (Calc.)	INOR-93-6007	modified from EPA 6010D & Analytical Protocol	ICP/OES
pH, 2:1 CaCl2 Extraction	INOR-93-6031	modified from EPA 9045D and MCKEAGUE 3.11	PH METER

Results relate only to the items tested. Results apply to samples as received.

SOIL ANALYSIS REVIEWED BY: Jacky Zhu, Spectroscopy Technician

TRACE ORGANICS REVIEWED BY: Oksana Gushyla, Trace Organics Lab Supervisor

DATE REPORTED: Nov 16, 2021

PAGES (INCLUDING COVER): 23

VERSION*: 1

Should you require any information regarding this analysis please contact your client services representative at (905) 712-5100

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3176795-3176901 EC was determined on the DI water extract obtained from the 2:1 leaching procedure (2 parts DI water:1 part soil). pH was determined on the 0.01M CaCl2 extract prepared at 2:1 ratio. SAR is a calculated parameter.

3176795-3176889 Results are based on the dry weight of the soil.
DDT total is a calculated parameter. The calculated value is the sum of op'DDT and pp'DDT.
DDD total is a calculated parameter. The calculated value is the sum of op'DDD and pp'DDD.
DDE total is a calculated parameter. The calculated value is the sum of op'DDE and pp'DDE.
Endosulfan total is a calculated parameter. The calculated value is the sum of Endosulfan I and Endosulfan II.
Chlordane total is a calculated parameter. The calculated value is the sum of Alpha-Chlordane and Gamma-Chlordane.
PCB total is a calculated parameter. The calculated value is the sum of Aroclor 1242, Aroclor 1248, Aroclor 1254 and Aroclor 1260.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3176793-3176902 Results are based on the dry weight of the soil.
Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&j)Fluoranthene isomers because the isomers co-elute on the GC column.
2- and 1-Methyl Naphthalene is a calculated parameter. The calculated value is the sum of 2-Methyl Naphthalene and 1-Methyl Naphthalene.

Analysis performed at AGAT Toronto (unless marked by *)

O. Reg. 153(511) - PHCs F1 - F4 (Soil)

DATE RECEIVED: 2021-11-05

DATE REPORTED: 2021-11-16

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3176893-3176906 Results are based on sample dry weight.
The C6-C10 fraction is calculated using Toluene response factor.
Xylenes is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.
Quality Control Data is available upon request.

Comments: NA signifies Not Applicable.
pH duplicates QA acceptance criteria was met relative as stated in Table 5-15 of Analytical Protocol document.
Duplicate NA: results are under 5X the RDL and will not be calculated.
For a multi-element scan for lab control standards and matrix spikes, up to 10% of analytes may exceed the quoted limits by up to 10% absolute and it is considered acceptable.

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

O. Reg. 153(511) - Metals & Inorganics (Soil)

DATE RECEIVED: 2021-11-08

DATE REPORTED: 2021-11-20

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3185854-3185865 EC was determined on the DI water extract obtained from the 2:1 leaching procedure (2 parts DI water:1 part soil). pH was determined on the 0.01M CaCl2 extract prepared at 2:1 ratio. SAR is a calculated parameter.

Analysis performed at AGAT Toronto (unless marked by *)

Surrogate	Unit	Acceptable Limits					
TCMX	%	50-140			80	90	105
Decachlorobiphenyl	%	50-140			89	102	107

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3185851-3185869 Results are based on the dry weight of the soil.
DDT total is a calculated parameter. The calculated value is the sum of op'DDT and pp'DDT.
DDD total is a calculated parameter. The calculated value is the sum of op'DDD and pp'DDD.
DDE total is a calculated parameter. The calculated value is the sum of op'DDE and pp'DDE.
Endosulfan total is a calculated parameter. The calculated value is the sum of Endosulfan I and Endosulfan II.
Chlordane total is a calculated parameter. The calculated value is the sum of Alpha-Chlordane and Gamma-Chlordane.
PCB total is a calculated parameter. The calculated value is the sum of Aroclor 1242, Aroclor 1248, Aroclor 1254 and Aroclor 1260.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

O. Reg. 153(511) - PHCs F1 - F4 (Soil)

DATE RECEIVED: 2021-11-08

DATE REPORTED: 2021-11-20

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3185858-3185867 Results are based on sample dry weight.
The C6-C10 fraction is calculated using Toluene response factor.
Xylenes is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.
Quality Control Data is available upon request.

Comments: NA signifies Not Applicable.
pH duplicates QA acceptance criteria was met relative as stated in Table 5-15 of Analytical Protocol document.
Duplicate NA: results are under 5X the RDL and will not be calculated.
For a multi-element scan for lab control standards and matrix spikes, up to 10% of analytes may exceed the quoted limits by up to 10% absolute and it is considered acceptable.

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

Surrogate	Unit	Acceptable Limits				
Toluene-d8	% Recovery	50-140			90	92
Terphenyl	%	60-140			92	92

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3211735-3211745 Results are based on sample dry weight.
The C6-C10 fraction is calculated using toluene response factor.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified without the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3211735-3211745 The sample was analyzed using the high level technique. The sample was extracted using methanol, a small amount of the methanol extract was diluted in water and the purge & trap GC/MS analysis was performed. Results are based on the dry weight of the soil.
Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene + o-Xylene.
1,3-Dichloropropene total is a calculated parameter. The calculated value is the sum of Cis-1,3-Dichloropropene and Trans-1,3-Dichloropropene.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

pH, 2:1 CaCl2 Extraction	3215870		7.86	7.80	0.8%	NA	101%	80%	120%						

Comments: NA signifies Not Applicable.
pH duplicates QA acceptance criteria was met relative as stated in Table 5-15 of Analytical Protocol document.
Duplicate NA: results are under 5X the RDL and will not be calculated.
For a multi-element scan for lab control standards and matrix spikes, up to 10% of analytes may exceed the quoted limits by up to 10% absolute and it is considered acceptable.

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Comments: When the average of the sample and duplicate results is less than 5x the RDL, the Relative Percent Difference (RPD) will be indicated as Not Applicable (NA).

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Comments: NA signifies Not Applicable.
pH duplicates QA acceptance criteria was met relative as stated in Table 5-15 of Analytical Protocol document.
Duplicate NA: results are under 5X the RDL and will not be calculated.
For a multi-element scan for lab control standards and matrix spikes, up to 10% of analytes may exceed the quoted limits by up to 10% absolute and it is considered acceptable.

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

DATE RECEIVED: 2021-11-16

DATE REPORTED: 2021-11-26

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3216079-3216087 EC was determined on the DI water extract obtained from the 2:1 leaching procedure (2 parts DI water:1 part soil). pH was determined on the 0.01M CaCl2 extract prepared at 2:1 ratio. SAR is a calculated parameter.

Terphenyl-d14	%	50-140			99	99

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3216080-3216086 Results are based on the dry weight of the soil.
Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&j)Fluoranthene isomers because the isomers co-elute on the GC column.
2- and 1-Methyl Naphthalene is a calculated parameter. The calculated value is the sum of 2-Methyl Naphthalene and 1-Methyl Naphthalene.

F2 (C10 to C16)	µg/g	230	10		<10	<10
F3 (C16 to C34)	µg/g	1700	50		<50	<50
F4 (C34 to C50)	µg/g	3300	50		<50	<50
Gravimetric Heavy Hydrocarbons	µg/g	3300	50		NA	NA
Moisture Content	%		0.1		17.4	15.3
Surrogate	Unit	Acceptable Limits				
Toluene-d8	% Recovery	50-140			71	90
Terphenyl	%	60-140			94	87

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3216085-3216089 Results are based on sample dry weight.
The C6-C10 fraction is calculated using toluene response factor.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified without the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3216085-3216089 The sample was analyzed using the high level technique. The sample was extracted using methanol, a small amount of the methanol extract was diluted in water and the purge & trap GC/MS analysis was performed. Results are based on the dry weight of the soil.
Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene + o-Xylene.
1,3-Dichloropropene total is a calculated parameter. The calculated value is the sum of Cis-1,3-Dichloropropene and Trans-1,3-Dichloropropene.

pH, 2:1 CaCl2 Extraction	3222492		7.65	7.63	0.3%	NA	99%	80%	120%						

Comments: NA signifies Not Applicable.
pH duplicates QA acceptance criteria was met relative as stated in Table 5-15 of Analytical Protocol document.
Duplicate NA: results are under 5X the RDL and will not be calculated.

More than 90% of the elements met acceptance limits and overall data quality is acceptable for use. For a multi-element scan up to 10% of analytes may exceed the quoted limits by up to 10% absolute.

Matrix spike NA: Spike level < native concentration. Matrix spike acceptance limits do not apply and are not calculated.

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Chain of Custody Record

If this is a Drinking Water sample, please use Drinking Water Chain of Custody Form (potable water consumed by humans)

Laboratory Use Only

Work Order #: 21T830891

Cooler Quantity:

Arrival Temperatures: 17.2 | 17.2 | 17.4

Custody Seal Intact: ☐ Yes ☐ No ☐ N/A

Notes: free ice

Report Information:

Company: WSP Inc.
Contact: Vanessa Oetinger
Address: 2 International Blvd, Etobicoke

Phone: Fax:

Reports to be sent to:
1. Email: Vanessa.oetinger.com
2. Email: matt.roy@wsp.com

Regulatory Requirements:

(Please check all applicable boxes)

☑ Regulation 153/04
Table 3 (Indicate One)
☑ Ind/Com
☐ Res/Park
☐ Agriculture

Soil Texture (Check One)
☑ Coarse
☐ Fine

☐ Excess Soils R406
Table ____ (Indicate One)

☐ Regulation 558

☐ CCME

☐ Sewer Use
☐ Sanitary ☐ Storm
Region

☐ Prov. Water Quality Objectives (PWQO)

☐ Other
Indicate One

Is this submission for a **Record of Site Condition?** ☑ Yes ☐ No

Report Guideline on *Certificate of Analysis* ☑ Yes ☐ No

Turnaround Time (TAT) Required:

Regular TAT ☑ 5 to 7 Business Days

Rush TAT (Rush Surcharges Apply)

☐ 3 Business Days ☐ 2 Business Days ☐ Next Business Day

OR Date Required (Rush Surcharges May Apply):

Please provide prior notification for rush TAT
*TAT is exclusive of weekends and statutory holidays

For 'Same Day' analysis, please contact your AGAT CPM

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

O. Reg. 153(511) - Metals & Inorganics (Soil)

DATE RECEIVED: 2021-11-17

DATE REPORTED: 2021-12-02

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3221440-3221490 EC was determined on the DI water extract obtained from the 2:1 leaching procedure (2 parts DI water:1 part soil). pH was determined on the 0.01M CaCl2 extract prepared at 2:1 ratio. SAR is a calculated parameter.

O. Reg. 153(511) - OC Pesticides + PCBs (Soil)

DATE RECEIVED: 2021-11-17

DATE REPORTED: 2021-12-02

		SAMPLE DESCRIPTION:		BH21-43 SS1	BH21-1 SS1
		SAMPLE TYPE:		Soil	Soil
		DATE SAMPLED:		2021-11-17	2021-11-17
Parameter	Unit	G / S	RDL	3221417	3221488
Moisture Content	%		0.1	13.5	12.4
wet weight OC/PCB	g		NA	10.12	10.45
Surrogate	Unit	Acceptable Limits			
TCMX	%	50-140		83	80
Decachlorobiphenyl	%	50-140		92	86

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3221417-3221488 Results are based on the dry weight of the soil.
DDT total is a calculated parameter. The calculated value is the sum of op'DDT and pp'DDT.
DDD total is a calculated parameter. The calculated value is the sum of op'DDD and pp'DDD.
DDE total is a calculated parameter. The calculated value is the sum of op'DDE and pp'DDE.
Endosulfan total is a calculated parameter. The calculated value is the sum of Endosulfan I and Endosulfan II.
Chlordane total is a calculated parameter. The calculated value is the sum of Alpha-Chlordane and Gamma-Chlordane.
PCB total is a calculated parameter. The calculated value is the sum of Aroclor 1242, Aroclor 1248, Aroclor 1254 and Aroclor 1260.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

O. Reg. 153(511) - PHCs F1-F4 (Soil)

DATE RECEIVED: 2021-11-17

DATE REPORTED: 2021-12-02

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3221448-3221492 Results are based on the dry weight of the sample.
The C6-C10 (F1) fraction is calculated using toluene response factor.
The C10 - C16 (F2), C16 - C34 (F3), and C34 - C50 (F4) fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons (F4g) are not included in and cannot be added to the Total C6-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
Quality control data is available upon request.
Assistance in the interpretation of data is available upon request.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
The chromatogram returned to baseline by the retention time of nC50.
C6 –C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
C>10 – C16 (F2- Napthalene) is a calculated parameter. The calculated value is F2 - Napthalene (if requested). The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
C>16 - C34 (F3-PAH) is a calculated parameter. The calculated value is F3-PAH (if requested). The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
Xylenes is a calculated parameter. The calculated value is the sum of m&p-Xylenes + o-Xylene. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
Extraction and holding times were met for this sample.

Electrical Conductivity (2:1)	3225912		0.213	0.214	0.5%	< 0.005	102%	80%	120%						
Sodium Adsorption Ratio (2:1) (Calc.)	3225912		0.294	0.285	3.1%	NA									
pH, 2:1 CaCl2 Extraction	3242174		7.43	7.39	0.5%	NA	101%	80%	120%						

Comments: NA signifies Not Applicable.
pH duplicates QA acceptance criteria was met relative as stated in Table 5-15 of Analytical Protocol document.
Duplicate NA: results are under 5X the RDL and will not be calculated.

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

O. Reg. 153(511) - Metals & Inorganics (Soil)

DATE RECEIVED: 2021-11-18

DATE REPORTED: 2021-11-26

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3224201 EC was determined on the DI water extract obtained from the 2:1 leaching procedure (2 parts DI water:1 part soil). pH was determined on the 0.01M CaCl2 extract prepared at 2:1 ratio. SAR is a calculated parameter.

Naphthalene-d8	%	50-140		79
Acridine-d9	%	50-140		97
Terphenyl-d14	%	50-140		111

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition - Soil - Industrial/Commercial/Community Property Use - Coarse Textured Soils
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3223983 Results are based on the dry weight of the soil.
Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&j)Fluoranthene isomers because the isomers co-elute on the GC column.
2- and 1-Methyl Naphthalene is a calculated parameter. The calculated value is the sum of 2-Methyl Naphthalene and 1-Methyl Naphthalene.

O. Reg. 153(511) - PHCs F1-F4 (Soil)

DATE RECEIVED: 2021-11-18

DATE REPORTED: 2021-11-26

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard

3224132-3224217 Results are based on the dry weight of the sample.
The C6-C10 (F1) fraction is calculated using toluene response factor.
The C10 - C16 (F2), C16 - C34 (F3), and C34 - C50 (F4) fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons (F4g) are not included in and cannot be added to the Total C6-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
Quality control data is available upon request.
Assistance in the interpretation of data is available upon request.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
The chromatogram returned to baseline by the retention time of nC50.
C6 –C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
C>10 – C16 (F2- Napthalene) is a calculated parameter. The calculated value is F2 - Napthalene (if requested). The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
C>16 - C34 (F3-PAH) is a calculated parameter. The calculated value is F3-PAH (if requested). The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
Xylenes is a calculated parameter. The calculated value is the sum of m&p-Xylenes + o-Xylene. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
Extraction and holding times were met for this sample.

Comments: Duplicate NA: results are less than 5X the RDL and RDP will not be calculated.
The sample spikes and dups are not from the same sample ID.

Certified By: NPopowkolof

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

SAMPLED BY:MR

O. Reg. 153(511) - PHCs F1-F4 (Soil)

DATE RECEIVED: 2021-11-18

DATE REPORTED: 2021-11-30

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard

3225539-3225577 Results are based on the dry weight of the sample.
The C6-C10 (F1) fraction is calculated using toluene response factor.
The C10 - C16 (F2), C16 - C34 (F3), and C34 - C50 (F4) fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons (F4g) are not included in and cannot be added to the Total C6-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
Quality control data is available upon request.
Assistance in the interpretation of data is available upon request.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
The chromatogram returned to baseline by the retention time of nC50.
C6 –C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
C>10 – C16 (F2- Napthalene) is a calculated parameter. The calculated value is F2 - Napthalene (if requested). The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
C>16 - C34 (F3-PAH) is a calculated parameter. The calculated value is F3-PAH (if requested). The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
Xylenes is a calculated parameter. The calculated value is the sum of m&p-Xylenes + o-Xylene. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.

Sample holding time exceeded for F2-F4 analysis.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

DATE REPORTED: 2021-12-03

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3248184-3248302 EC was determined on the DI water extract obtained from the 2:1 leaching procedure (2 parts DI water:1 part soil). pH was determined on the 0.01M CaCl2 extract prepared at 2:1 ratio. SAR is a calculated parameter.

Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3248183-3248220 Results are based on the dry weight of the soil.
DDT total is a calculated parameter. The calculated value is the sum of op'DDT and pp'DDT.
DDD total is a calculated parameter. The calculated value is the sum of op'DDD and pp'DDD.
DDE total is a calculated parameter. The calculated value is the sum of op'DDE and pp'DDE.
Endosulfan total is a calculated parameter. The calculated value is the sum of Endosulfan I and Endosulfan II.
Chlordane total is a calculated parameter. The calculated value is the sum of Alpha-Chlordane and Gamma-Chlordane.
PCB total is a calculated parameter. The calculated value is the sum of Aroclor 1242, Aroclor 1248, Aroclor 1254 and Aroclor 1260.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

Moisture Content	%		0.1	10.0	12.3	10.0
Surrogate	Unit	Acceptable Limits				
Toluene-d8	% Recovery	50-140		113	86	89
Terphenyl	%	60-140		72	78	75

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3248186-3248197 Results are based on sample dry weight.
The C6-C10 fraction is calculated using toluene response factor.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified without the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

DATE REPORTED: 2021-12-03

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3248222-3248301 Results are based on sample dry weight.
The C6-C10 fraction is calculated using Toluene response factor.
Xylenes is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.
Quality Control Data is available upon request.

O. Reg. 153(511) - PHCs F1 - F4 (with PAHs) (Soil)

DATE RECEIVED: 2021-11-24

DATE REPORTED: 2021-12-03

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3248305 Results are based on sample dry weight.
The C6-C10 fraction is calculated using toluene response factor.
Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX and PAH contributions.
C>10 – C16 (F2- Naphthalene) is a calculated parameter. The calculated value is F2 - Naphthalene.
C>16 - C34 (F3-PAH) is a calculated parameter. The calculated value is F3-PAH (PAH: sum of Phenanthrene, Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Fluoranthene, Dibenzo(a,h)anthracene, Indeno(1,2,3-c,d)pyrene and Pyrene).
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.

Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3248186-3248197 The sample was analyzed using the high level technique. The sample was extracted using methanol, a small amount of the methanol extract was diluted in water and the purge & trap GC/MS analysis was performed. Results are based on the dry weight of the soil.
Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene + o-Xylene.
1,3-Dichloropropene total is a calculated parameter. The calculated value is the sum of Cis-1,3-Dichloropropene and Trans-1,3-Dichloropropene.

Comments: NA signifies Not Applicable.
pH duplicates QA acceptance criteria was met relative as stated in Table 5-15 of Analytical Protocol document.
Duplicate NA: results are under 5X the RDL and will not be calculated.

More than 90% of the elements met acceptance limits and overall data quality is acceptable for use. For a multi-element scan up to 10% of analytes may exceed the quoted limits by up to 10% absolute.

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

RPT Date: Dec 03, 2021		REFERENCE MATERIAL			METHOD BLANK SPIKE			MATRIX SPIKE		
PARAMETER	Sample Id	Measured Value	Acceptable Limits		Recovery	Acceptable Limits		Recovery	Acceptable Limits	
			Lower	Upper		Lower	Upper		Lower	Upper
O. Reg. 153(511) - Metals & Inorganics (Soil)										
Antimony		133%	70%	130%	110%	80%	120%	71%	70%	130%

Comments: NA signifies Not Applicable.
pH duplicates QA acceptance criteria was met relative as stated in Table 5-15 of Analytical Protocol document.
Duplicate NA: results are under 5X the RDL and will not be calculated.

More than 90% of the elements met acceptance limits and overall data quality is acceptable for use. For a multi-element scan up to 10% of analytes may exceed the quoted limits by up to 10% absolute.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation.

Results relate only to the items tested. Results apply to samples as received.

Regulatory Requirements:
(Please check all applicable boxes)
☑ Regulation 153/04 — Table 1 (Indicate One) — ☑ Ind/Com ☐ Res/Park ☐ Agriculture
Soil Texture (Check One) ☑ Coarse ☐ Fine
☐ Excess Soils R406 — Table (Indicate One)
☐ Regulation 558
☐ CCME
☐ Sewer Use ☐ Sanitary ☐ Storm — (Region)
☐ Prov. Water Quality Objectives (PWQO)
☐ Other (Indicate One)

Turnaround Time (TAT) Required:
Regular TAT ☑ 5 to 7 Business Days
Rush TAT (Rush Surcharges Apply)
☐ 3 Business Days ☐ 2 Business Days ☐ Next Business Day
OR Date Required (Rush Surcharges May Apply):
Please provide prior notification for rush TAT
**TAT is exclusive of weekends and statutory holidays*
For 'Same Day' analysis, please contact your AGAT CPM

Project Information:
Project: 211-10139-00
Site Location: ORGY Rail
Sampled By: Matthew Roy
AGAT Quote #: PO:
Please note: If quotation number is not provided, client will be billed full price for analysis.

Is this submission for a **Record of Site Condition?** ☑ Yes ☐ No

Report Guideline on *Certificate of Analysis* ☑ Yes ☐ No

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

O. Reg. 153(511) - Metals & Inorganics (Soil)

DATE RECEIVED: 2021-11-29

DATE REPORTED: 2021-12-14

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3269234-3269312 EC was determined on the DI water extract obtained from the 2:1 leaching procedure (2 parts DI water:1 part soil). pH was determined on the 0.01M CaCl2 extract prepared at 2:1 ratio. SAR is a calculated parameter.

DATE RECEIVED: 2021-11-29

DATE REPORTED: 2021-12-14

		SAMPLE DESCRIPTION:		BH21-7 SS1
		SAMPLE TYPE:		Soil
		DATE SAMPLED:		2021-11-29
Parameter	Unit	G / S	RDL	3269233
Moisture Content	%		0.1	22.1
wet weight OC/PCB	g		NA	10.05
Surrogate	Unit	Acceptable Limits		
TCMX	%	50-140		74
Decachlorobiphenyl	%	50-140		80

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3269233 Results are based on the dry weight of the soil.
DDT total is a calculated parameter. The calculated value is the sum of op'DDT and pp'DDT.
DDD total is a calculated parameter. The calculated value is the sum of op'DDD and pp'DDD.
DDE total is a calculated parameter. The calculated value is the sum of op'DDE and pp'DDE.
Endosulfan total is a calculated parameter. The calculated value is the sum of Endosulfan I and Endosulfan II.
Chlordane total is a calculated parameter. The calculated value is the sum of Alpha-Chlordane and Gamma-Chlordane.
PCB total is a calculated parameter. The calculated value is the sum of Aroclor 1242, Aroclor 1248, Aroclor 1254 and Aroclor 1260.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

O. Reg. 153(511) - PHCs F1 - F4 (-BTEX) (Soil)

DATE RECEIVED: 2021-11-29

DATE REPORTED: 2021-12-14

		SAMPLE DESCRIPTION:		BH21-7 SS5	BH21-8 SS7
		SAMPLE TYPE:		Soil	Soil
		DATE SAMPLED:		2021-11-29	2021-11-29
Parameter	Unit	G / S	RDL	3269235	3269313
F1 (C6 - C10)	µg/g	25	5	<5	<5
F1 (C6 to C10) minus BTEX	µg/g	25	5	<5	<5
F2 (C10 to C16)	µg/g	10	10	<10	<10
F3 (C16 to C34)	µg/g	240	50	<50	<50
F4 (C34 to C50)	µg/g	120	50	<50	<50
Gravimetric Heavy Hydrocarbons	µg/g	120	50	NA	NA
Moisture Content	%		0.1	10.0	10.1
Surrogate	Unit	Acceptable Limits			
Toluene-d8	% Recovery	50-140		54	107
Terphenyl	%	60-140		88	97

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3269235-3269313 Results are based on sample dry weight.
The C6-C10 fraction is calculated using toluene response factor.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified without the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

Xylenes (Total)	ug/g	0.05	0.05	<0.05	<0.05
1,3-Dichloropropene (Cis + Trans)	µg/g	0.05	0.04	<0.04	<0.04
Hexane, n-	µg/g	0.05	0.05	<0.05	<0.05
Surrogate	Unit	Acceptable Limits			
Toluene-d8	% Recovery	50-140		99	104
4-Bromofluorobenzene	% Recovery	50-140		76	74

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3269235-3269313 The sample was analyzed using the high level technique. The sample was extracted using methanol, a small amount of the methanol extract was diluted in water and the purge & trap GC/MS analysis was performed. Results are based on the dry weight of the soil.
Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene + o-Xylene.
1,3-Dichloropropene total is a calculated parameter. The calculated value is the sum of Cis-1,3-Dichloropropene and Trans-1,3-Dichloropropene.

Analysis performed at AGAT Toronto (unless marked by *)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

SAMPLED BY:

O. Reg. 153(511) - OC Pesticides + PCBs (Water)

DATE RECEIVED: 2021-12-02

DATE REPORTED: 2021-12-15

		SAMPLE DESCRIPTION:	BH21-7
		SAMPLE TYPE:	Water
		DATE SAMPLED:	2021-12-02
Surrogate	Unit	Acceptable Limits	3296850
TCMX	%	50-140	73
Decachlorobiphenyl	%	50-140	101

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3296850 DDT total is a calculated parameter. The calculated value is the sum of op'DDT and pp'DDT.
DDD total is a calculated parameter. The calculated value is the sum of op'DDD and pp'DDD.
DDE total is a calculated parameter. The calculated value is the sum of op'DDE and pp'DDE.
Endosulfan total is a calculated parameter. The calculated value is the sum of Endosulfan I and Endosulfan II.
Chlordane total is a calculated parameter. The calculated value is the sum of Alpha-Chlordane and Gamma-Chlordane.
PCB total is a calculated parameter. The calculated value is the sum of Aroclor 1242, Aroclor 1248, Aroclor 1254 and Aroclor 1260.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

Sediment				NO	NO
Surrogate	Unit	Acceptable Limits			
Toluene-d8	% Recovery	50-140		101	71.2
Terphenyl	% Recovery	60-140		79	85

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3296850-3296853 The C6-C10 fraction is calculated using toluene response factor.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX and PAH contributions.
C>10 – C16 (F2- Naphthalene) is a calculated parameter. The calculated value is F2 - Naphthalene.
C>16 - C34 (F3-PAH) is a calculated parameter. The calculated value is F3-PAH (PAH: sum of Phenanthrene, Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Fluoranthene, Dibenzo(a,h)anthracene, Indeno(1,2,3-c,d)pyrene and Pyrene).
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.

Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3293947 Results are based on sample dry weight.
The C6-C10 fraction is calculated using toluene response factor.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified without the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

Comments: When the average of the sample and duplicate results is less than 5x the RDL, the Relative Percent Difference (RPD) will be indicated as Not Applicable (NA).

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Comments: NA signifies Not Applicable.
pH duplicates QA acceptance criteria was met relative as stated in Table 5-15 of Analytical Protocol document.
Duplicate NA: results are under 5X the RDL and will not be calculated.

More than 90% of the elements met acceptance limits and overall data quality is acceptable for use. For a multi-element scan up to 10% of analytes may exceed the quoted limits by up to 10% absolute.

AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

SAMPLED BY:

O. Reg. 153(511) - Metals & Inorganics (Soil)

DATE RECEIVED: 2021-12-02

DATE REPORTED: 2021-12-20

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3291580-3291586 EC was determined on the DI water extract obtained from the 2:1 leaching procedure (2 parts DI water:1 part soil). pH was determined on the 0.01M CaCl2 extract prepared at 2:1 ratio. SAR is a calculated parameter.

Terphenyl-d14	%	50-140		75	106

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3291568-3291574 Results are based on the dry weight of the soil.
Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&j)Fluoranthene isomers because the isomers co-elute on the GC column.
2- and 1-Methyl Naphthalene is a calculated parameter. The calculated value is the sum of 2-Methyl Naphthalene and 1-Methyl Naphthalene.

Certificate of Analysis

AGAT WORK ORDER: 21T839249

PROJECT: 211-10139-00 200 02

CLIENT NAME: WSP CANADA INC.

ATTENTION TO: Vanessa Oetinger

SAMPLING SITE:

SAMPLED BY:

O. Reg. 153(511) - PHCs F1 - F4 (Soil)

DATE RECEIVED: 2021-12-02

DATE REPORTED: 2021-12-20

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3291573 Results are based on sample dry weight.
The C6-C10 fraction is calculated using Toluene response factor.
Xylenes is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were not met for this sample.
Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.
Quality Control Data is available upon request.

Comments: NA signifies Not Applicable.
pH duplicates QA acceptance criteria was met relative as stated in Table 5-15 of Analytical Protocol document.
Duplicate NA: results are under 5X the RDL and will not be calculated.
For a multi-element scan for lab control standards and matrix spikes, up to 10% of analytes may exceed the quoted limits by up to 10% absolute and it is considered acceptable.

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Chain of Custody Record

If this is a Drinking Water sample, please use Drinking Water Chain of Custody Form (potable water consumed by humans)

Laboratory Use Only
Work Order #: 21T839249
Cooler Quantity:
Arrival Temperatures: 2.8 | 2.9 | 3.7
Custody Seal Intact: ☐Yes ☐No ☐N/A
Notes:

Report Information:
Company: WSP Canada Inc.
Contact: Vanessa. Oetinger
Address: 2 International Blvd Toronto, ON
Phone: Fax:
Reports to be sent to:
1. Email: Vanessa.Oetinger@wsp.com
2. Email:

Regulatory Requirements:
(Please check all applicable boxes)
☒ Regulation 153/04 — Table 1 (Indicate One) — ☐Ind/Com ☒Res/Park ☐Agriculture
Soil Texture (Check One): ☒Coarse ☐Fine
☐ Excess Soils R406 — Table (Indicate One)
☐ Regulation 558
☐ CCME
☐ Sewer Use ☐Sanitary ☐Storm — (Region)
☐ Prov. Water Quality Objectives (PWQO)
☐ Other (Indicate One)

Is this submission for a **Record of Site Condition?** ☐ Yes ☐ No

Report Guideline on *Certificate of Analysis* ☐ Yes ☐ No

Turnaround Time (TAT) Required:
Regular TAT ☐ 5 to 7 Business Days
Rush TAT (Rush Surcharges Apply)
☐ 3 Business Days ☐ 2 Business Days ☐ Next Business Day
OR Date Required (Rush Surcharges May Apply):
Please provide prior notification for rush TAT
*TAT is exclusive of weekends and statutory holidays
For 'Same Day' analysis, please contact your AGAT CPM

SOIL ANALYSIS REVIEWED BY: Amanjot Bhela, Inorganic Lab Manager

TRACE ORGANICS REVIEWED BY: Inga Kuzmina, Trace Organics Lab Manager

DATE REPORTED: Dec 18, 2021

PAGES (INCLUDING COVER): 17

VERSION*: 1

Should you require any information regarding this analysis please contact your client services representative at (905) 712-5100

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

O. Reg. 153(511) - Metals & Inorganics (Soil)

DATE RECEIVED: 2021-12-06

DATE REPORTED: 2021-12-18

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3304637-3304642 EC was determined on the DI water extract obtained from the 2:1 leaching procedure (2 parts DI water:1 part soil). pH was determined on the 0.01M CaCl2 extract prepared at 2:1 ratio. SAR is a calculated parameter.

		DATE SAMPLED:		2021-12-06	2021-12-06
Parameter	Unit	G / S	RDL	3304639	3304644
Moisture Content	%		0.1	14.6	12.6
wet weight OC/PCB	g		NA	10.03	10.12
Surrogate	Unit	Acceptable Limits			
TCMX	%	50-140		76	74
Decachlorobiphenyl	%	50-140		77	85

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3304639-3304644 Results are based on the dry weight of the soil.
DDT total is a calculated parameter. The calculated value is the sum of op'DDT and pp'DDT.
DDD total is a calculated parameter. The calculated value is the sum of op'DDD and pp'DDD.
DDE total is a calculated parameter. The calculated value is the sum of op'DDE and pp'DDE.
Endosulfan total is a calculated parameter. The calculated value is the sum of Endosulfan I and Endosulfan II.
Chlordane total is a calculated parameter. The calculated value is the sum of Alpha-Chlordane and Gamma-Chlordane.
PCB total is a calculated parameter. The calculated value is the sum of Aroclor 1242, Aroclor 1248, Aroclor 1254 and Aroclor 1260.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3304640-3304643 Results are based on sample dry weight.
The C6-C10 fraction is calculated using Toluene response factor.
Xylenes is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.
Quality Control Data is available upon request.

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

O. Reg. 153(511) - Metals & Inorganics (Soil)

DATE RECEIVED: 2021-12-07

DATE REPORTED: 2021-12-20

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3310262 EC was determined on the DI water extract obtained from the 2:1 leaching procedure (2 parts DI water:1 part soil). pH was determined on the 0.01M CaCl2 extract prepared at 2:1 ratio. SAR is a calculated parameter.

Acridine-d9	%	50-140		90
Terphenyl-d14	%	50-140		94

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3310265 Results are based on the dry weight of the soil.
Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&j)Fluoranthene isomers because the isomers co-elute on the GC column.
2- and 1-Methyl Naphthalene is a calculated parameter. The calculated value is the sum of 2-Methyl Naphthalene and 1-Methyl Naphthalene.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3310271 Results are based on sample dry weight.
The C6-C10 fraction is calculated using toluene response factor.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified without the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3310271 The sample was analyzed using the high level technique. The sample was extracted using methanol, a small amount of the methanol extract was diluted in water and the purge & trap GC/MS analysis was performed. Results are based on the dry weight of the soil.
Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene + o-Xylene.
1,3-Dichloropropene total is a calculated parameter. The calculated value is the sum of Cis-1,3-Dichloropropene and Trans-1,3-Dichloropropene.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

Benzo(g,h,i)perylene	µg/L	0.2	0.20	<0.20
2-and 1-methyl Naphthalene	µg/L	2	0.20	<0.20
Sediment				No
Surrogate	Unit	Acceptable Limits		
Naphthalene-d8	%	50-140		120
Acridine-d9	%	50-140		98
Terphenyl-d14	%	50-140		85

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3310367 Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&(j)Fluoranthene isomers because the isomers co-elute on the GC column.
2- and 1-Methyl Naphthalene is a calculated parameter. The calculated value is the sum of 2-Methyl Naphthalene and 1-Methyl Naphthalene. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

O. Reg. 153(511) - PHCs F1 - F4 (Water)

DATE RECEIVED: 2021-12-07

DATE REPORTED: 2021-12-21

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3310483-3310486 The C6-C10 fraction is calculated using Toluene response factor.
Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and nC34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16 - C50 and are only determined if the chromatogram of the C34 - C50 Hydrocarbons indicated that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6-C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153/04, results are considered valid without determining the PAH contribution if not requested by the client.
NA = Not Applicable

Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

Surrogate	Unit	Acceptable Limits				
Toluene-d8	% Recovery	50-140		88	107	82
4-Bromofluorobenzene	% Recovery	50-140		79	73	82

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3310367-3310488 Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
1,3-Dichloropropene total is a calculated parameter. The calculated value is the sum of Cis-1,3-Dichloropropene and Trans-1,3-Dichloropropene.
The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

Certificate of Analysis

AGAT WORK ORDER: 21T843989

PROJECT: 211-10139-00 Phase 200 02

CLIENT NAME: WSP CANADA INC.

ATTENTION TO: Marsad Jafar

SAMPLING SITE:

SAMPLED BY:

O. Reg. 153(511) - PHCs F2 - F4 (Water)

DATE RECEIVED: 2021-12-13

DATE REPORTED: 2021-12-15

				SAMPLE DESCRIPTION:	BH21-30
				SAMPLE TYPE:	Water
				DATE SAMPLED:	2021-12-13
Parameter	Unit	G / S	RDL		3337872
F2 (C10 to C16)	µg/L	150	100		<100
F3 (C16 to C34)	µg/L	500	100		<100
F4 (C34 to C50)	µg/L	500	100		<100
Gravimetric Heavy Hydrocarbons	µg/L		500		NA
Sediment					No
Surrogate	Unit	Acceptable Limits			
Terphenyl	%	60-140			111

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3337872 The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and nC34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16 - C50 and are only determined if the chromatogram of the C34 - C50 Hydrocarbons indicated that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 2-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

Parameter	Unit	G / S	RDL		3246761	3246768
Polychlorinated Biphenyls	ug/L	0.2	0.1		<0.1	<0.1
Surrogate	Unit	Acceptable Limits				
TCMX	%	50-140			80	104
Decachlorobiphenyl	%	50-140			98	112

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3246761-3246768 DDT total is a calculated parameter. The calculated value is the sum of op'DDT and pp'DDT.
DDD total is a calculated parameter. The calculated value is the sum of op'DDD and pp'DDD.
DDE total is a calculated parameter. The calculated value is the sum of op'DDE and pp'DDE.
Endosulfan total is a calculated parameter. The calculated value is the sum of Endosulfan I and Endosulfan II.
Chlordane total is a calculated parameter. The calculated value is the sum of Alpha-Chlordane and Gamma-Chlordane.
PCB total is a calculated parameter. The calculated value is the sum of Aroclor 1242, Aroclor 1248, Aroclor 1254 and Aroclor 1260.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

Terphenyl-d14	%	50-140			95	92	78

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3246761-3246774 Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&(j)Fluoranthene isomers because the isomers co-elute on the GC column.
2- and 1-Methyl Naphthalene is a calculated parameter. The calculated value is the sum of 2-Methyl Naphthalene and 1-Methyl Naphthalene. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3246774 The C6-C10 fraction is calculated using toluene response factor.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX and PAH contributions.
C>10 – C16 (F2- Naphthalene) is a calculated parameter. The calculated value is F2 - Naphthalene.
C>16 - C34 (F3-PAH) is a calculated parameter. The calculated value is F3-PAH (PAH: sum of Phenanthrene, Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Fluoranthene, Dibenzo(a,h)anthracene, Indeno(1,2,3-c,d)pyrene and Pyrene).
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.

Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Chain of Custody Record

If this is a Drinking Water sample, please use Drinking Water Chain of Custody Form (potable water consumed by humans)

Laboratory Use Only

Work Order #: 21T834096

Cooler Quantity:

Arrival Temperatures: 4.2 | 5.3 | 4.8

Custody Seal Intact: ☐ Yes ☐ No ☐ N/A

Notes: On Ice

Report Information:

Company: WSP
Contact: Vanessa Oetinger
Address: 2 International Blvd, Toronto, ON
Phone: 437-233-2935 Fax:
Reports to be sent to:
1. Email: vanessa.oetinger@wsp.com
2. Email: marsad.jafar@wsp.com

Regulatory Requirements:

(Please check all applicable boxes)

☑ Regulation 153/04 — Table 1 (Indicate One) ☐ Ind/Com ☐ Res/Park ☐ Agriculture
Soil Texture (Check One) ☐ Coarse ☐ Fine
☐ Excess Soils R406 — Table (Indicate One)
☐ Regulation 558
☐ CCME
☐ Sewer Use ☐ Sanitary ☐ Storm — (Region)
☐ Prov. Water Quality Objectives (PWQO)
☐ Other (Indicate One)

Is this submission for a **Record of Site Condition?** ☐ Yes ☐ No

Report Guideline on *Certificate of Analysis* ☐ Yes ☐ No

Turnaround Time (TAT) Required:

Regular TAT ☑ 5 to 7 Business Days

Rush TAT (Rush Surcharges Apply)

☐ 3 Business Days ☐ 2 Business Days ☐ Next Business Day

OR Date Required (Rush Surcharges May Apply):

Please provide prior notification for rush TAT
*TAT is exclusive of weekends and statutory holidays

For 'Same Day' analysis, please contact your AGAT CPM

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3285019-3285299 Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&(j)Fluoranthene isomers because the isomers co-elute on the GC column.
2- and 1-Methyl Naphthalene is a calculated parameter. The calculated value is the sum of 2-Methyl Naphthalene and 1-Methyl Naphthalene. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

O. Reg. 153(511) - PHCs F1 - F4 (with PAHs and VOC) (Water)

DATE RECEIVED: 2021-12-01

DATE REPORTED: 2021-12-16

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3285019-3285299 The C6-C10 fraction is calculated using toluene response factor.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX and PAH contributions.
C>10 – C16 (F2- Naphthalene) is a calculated parameter. The calculated value is F2 - Naphthalene.
C>16 - C34 (F3-PAH) is a calculated parameter. The calculated value is F3-PAH (PAH: sum of Phenanthrene, Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Fluoranthene, Dibenzo(a,h)anthracene, Indeno(1,2,3-c,d)pyrene and Pyrene).
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.

Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3285019-3285328 Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
1,3-Dichloropropene total is a calculated parameter. The calculated value is the sum of Cis-1,3-Dichloropropene and Trans-1,3-Dichloropropene.
The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.

(CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

		SAMPLE DESCRIPTION:	BH21-7
		SAMPLE TYPE:	Water
		DATE SAMPLED:	2021-12-02
Surrogate	Unit	Acceptable Limits	3296850
TCMX	%	50-140	73
Decachlorobiphenyl	%	50-140	101

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3296850 DDT total is a calculated parameter. The calculated value is the sum of op'DDT and pp'DDT.
DDD total is a calculated parameter. The calculated value is the sum of op'DDD and pp'DDD.
DDE total is a calculated parameter. The calculated value is the sum of op'DDE and pp'DDE.
Endosulfan total is a calculated parameter. The calculated value is the sum of Endosulfan I and Endosulfan II.
Chlordane total is a calculated parameter. The calculated value is the sum of Alpha-Chlordane and Gamma-Chlordane.
PCB total is a calculated parameter. The calculated value is the sum of Aroclor 1242, Aroclor 1248, Aroclor 1254 and Aroclor 1260.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

Gravimetric Heavy Hydrocarbons	µg/L		500	NA	NA
Sediment				NO	NO
Surrogate	Unit	Acceptable Limits			
Toluene-d8	% Recovery	50-140		101	71.2
Terphenyl	% Recovery	60-140		79	85

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3296850-3296853 The C6-C10 fraction is calculated using toluene response factor.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX and PAH contributions.
C>10 – C16 (F2- Naphthalene) is a calculated parameter. The calculated value is F2 - Naphthalene.
C>16 - C34 (F3-PAH) is a calculated parameter. The calculated value is F3-PAH (PAH: sum of Phenanthrene, Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Fluoranthene, Dibenzo(a,h)anthracene, Indeno(1,2,3-c,d)pyrene and Pyrene).
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.

Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

O. Reg. 153(511) - Metals & Inorganics (Water)

DATE RECEIVED: 2021-12-02

DATE REPORTED: 2021-12-15

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3296850-3296853 Metals analysis completed on a filtered sample.

Dilution required, RDL has been increased accordingly.

Analysis performed at AGAT Toronto (unless marked by *)

Certified By:

Results relate only to the items tested. Results apply to samples as received.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard

3293886-3293943 Results are based on the dry weight of the soil.
Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&j)Fluoranthene isomers because the isomers co-elute on the GC column.
2- and 1-Methyl Naphthalene is a calculated parameter. The calculated value is the sum of 2-Methyl Naphthalene and 1-Methyl Naphthalene.

Terphenyl	%	60-140		104

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3293947 Results are based on sample dry weight.
The C6-C10 fraction is calculated using toluene response factor.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified without the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.

O. Reg. 153(511) - PHCs F1 - F4 (Soil)

DATE RECEIVED: 2021-12-02

DATE REPORTED: 2021-12-15

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3293910-3293927 Results are based on sample dry weight.
The C6-C10 fraction is calculated using Toluene response factor.
Xylenes is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and n-C34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16-C50 and are only determined if the chromatogram of the C34 - C50 hydrocarbons indicates that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6 - C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 + nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153, results are considered valid without determining the PAH contribution if not requested by the client.
Quality Control Data is available upon request.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Soil - Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3293947 The sample was analyzed using the high level technique. The sample was extracted using methanol, a small amount of the methanol extract was diluted in water and the purge & trap GC/MS analysis was performed. Results are based on the dry weight of the soil.
Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene + o-Xylene.
1,3-Dichloropropene total is a calculated parameter. The calculated value is the sum of Cis-1,3-Dichloropropene and Trans-1,3-Dichloropropene.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.

Comments: NA signifies Not Applicable.
pH duplicates QA acceptance criteria was met relative as stated in Table 5-15 of Analytical Protocol document.
Duplicate NA: results are under 5X the RDL and will not be calculated.

More than 90% of the elements met acceptance limits and overall data quality is acceptable for use. For a multi-element scan up to 10% of analytes may exceed the quoted limits by up to 10% absolute.

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

*Notes

Disclaimer:

- All work conducted herein has been done using accepted standard protocols, and generally accepted practices and methods. AGAT test methods may incorporate modifications from the specified reference methods to improve performance.
- All samples will be disposed of within 30 days after receipt unless a Long Term Storage Agreement is signed and returned. Some specialty analysis may be exempt, please contact your Client Project Manager for details.
- AGAT's liability in connection with any delay, performance or non-performance of these services is only to the Client and does not extend to any other third party. Unless expressly agreed otherwise in writing, AGAT's liability is limited to the actual cost of the specific analysis or analyses included in the services.
- This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
- The test results reported herewith relate only to the samples as received by the laboratory.
- Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, warranties of merchantability, fitness for a particular purpose, or non-infringement. AGAT assumes no responsibility for any errors or omissions in the guidelines contained in this document.
- All reportable information as specified by ISO/IEC 17025:2017 is available from AGAT Laboratories upon request.

Member of: Association of Professional Engineers and Geoscientists of Alberta (APEGA)
Western Enviro-Agricultural Laboratory Association (WEALA)
Environmental Services Association of Alberta (ESAA)

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. Measurement Uncertainty is not taken into consideration when stating conformity with a specified requirement.

Pyrene	µg/L	0.2	0.20	<0.20
Benzo(a)anthracene	µg/L	0.2	0.20	<0.20
Chrysene	µg/L	0.1	0.10	<0.10
Benzo(b)fluoranthene	µg/L	0.1	0.10	<0.10
Benzo(k)fluoranthene	µg/L	0.1	0.10	<0.10
Benzo(a)pyrene	µg/L	0.01	0.01	<0.01
Indeno(1,2,3-cd)pyrene	µg/L	0.2	0.20	<0.20
Dibenz(a,h)anthracene	µg/L	0.2	0.20	<0.20
Benzo(g,h,i)perylene	µg/L	0.2	0.20	<0.20
2-and 1-methyl Naphthalene	µg/L	2	0.20	<0.20
Sediment				No
Surrogate	Unit	Acceptable Limits		
Naphthalene-d8	%	50-140		120
Acridine-d9	%	50-140		98
Terphenyl-d14	%	50-140		85

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3310367 Note: The result for Benzo(b)Fluoranthene is the total of the Benzo(b)&(j)Fluoranthene isomers because the isomers co-elute on the GC column.
2- and 1-Methyl Naphthalene is a calculated parameter. The calculated value is the sum of 2-Methyl Naphthalene and 1-Methyl Naphthalene. The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.
Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

O. Reg. 153(511) - PHCs F1 - F4 (Water)

DATE RECEIVED: 2021-12-07

DATE REPORTED: 2021-12-21

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3310483-3310486 The C6-C10 fraction is calculated using Toluene response factor.
Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
C6–C10 (F1 minus BTEX) is a calculated parameter. The calculated value is F1 minus BTEX.
The calculated parameters are non-accredited. The parameters that are components of the calculation are accredited.
The C10 - C16, C16 - C34, and C34 - C50 fractions are calculated using the average response factor for n-C10, n-C16, and nC34.
Gravimetric Heavy Hydrocarbons are not included in the Total C16 - C50 and are only determined if the chromatogram of the C34 - C50 Hydrocarbons indicated that hydrocarbons >C50 are present.
The chromatogram has returned to baseline by the retention time of nC50.
Total C6-C50 results are corrected for BTEX contribution.
This method complies with the Reference Method for the CWS PHC and is validated for use in the laboratory.
nC6 and nC10 response factors are within 30% of Toluene response factor.
nC10, nC16 and nC34 response factors are within 10% of their average.
C50 response factor is within 70% of nC10 + nC16 nC34 average.
Linearity is within 15%.
Extraction and holding times were met for this sample.
Fractions 1-4 are quantified with the contribution of PAHs. Under Ontario Regulation 153/04, results are considered valid without determining the PAH contribution if not requested by the client.
NA = Not Applicable

Sediment parameter is comment only based on visual inspection of the sample prior to extraction and is not an accredited test.

Comments: RDL - Reported Detection Limit; G / S - Guideline / Standard: Refers to Table 1: Full Depth Background Site Condition Standards - Ground Water - All Types of Property Uses
Guideline values are for general reference only. The guidelines provided may or may not be relevant for the intended use. Refer directly to the applicable standard for regulatory interpretation.

3310367-3310488 Xylenes total is a calculated parameter. The calculated value is the sum of m&p-Xylene and o-Xylene.
1,3-Dichloropropene total is a calculated parameter. The calculated value is the sum of Cis-1,3-Dichloropropene and Trans-1,3-Dichloropropene.
The calculated parameter is non-accredited. The parameters that are components of the calculation are accredited.

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

Comments: When the average of the sample and duplicate results is less than 5x the RDL, the Relative Percent Difference (RPD) will be indicated as Not Applicable (NA).

Certified By:

AGAT Laboratories is accredited to ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA) and/or Standards Council of Canada (SCC) for specific tests listed on the scope of accreditation. AGAT Laboratories (Mississauga) is also accredited by the Canadian Association for Laboratory Accreditation Inc. (CALA) for specific drinking water tests. Accreditations are location and parameter specific. A complete listing of parameters for each location is available from www.cala.ca and/or www.scc.ca. The tests in this report may not necessarily be included in the scope of accreditation. RPDs calculated using raw data. The RPD may not be reflective of duplicate values shown, due to rounding of final results.

Results relate only to the items tested. Results apply to samples as received.

1 INTRODUCTION & BACKGROUND

EnVision Consultants Ltd. (EnVision) was retained by the Region of Peel (the 'Client') to undertake a desktop geotechnical study in connection with a proposed trunk sewer along Kennedy Road, Orangeville-Brampton Railway (OBRY), Old School Road, Bovaird Drive, Vodden Street and Queen Street East. Collectively, these alignments form the study 'Site' in this report.

This report is an updated report of "Desktop Geotechnical Study – Proposed Trunk Sewer on Kennedy Rd. & Hurontario St. and Trunk Sewer / Watermain on Queen St., Brampton, Caledon, Peel Region", Project No. 24-0735 dated November 13, 2024, which considers an updated proposed alignment.

This desktop study project Site area is illustrated in the attached Figure 1.

The purpose of this desktop study is to review and broadly evaluate the geotechnical conditions along the Study route alignments based on existing published information and available data reports. This is to better understand the physiographic setting, the regional geology, and groundwater conditions along the project Site, to identify key geotechnical risks, and to assist in the scoping of future geotechnical and hydrogeological site investigation work. This desktop study report should be read in conjunction with EnVision's *Contaminant Overview Study*.

This report presents the results of our review of the available background information, which should be read in conjunction with the *General Comments and Limitations of Report* (Section 5). The readers' attention is specifically drawn to this information, as it is essential for the proper use and interpretation of this report. The interpretation and findings described in this report pertain to the specific project contemplated and are not applicable to any other project or site location.

2 SOURCES REVIEWED

Information regarding the local and regional subsurface ground and groundwater conditions was obtained from the Open Data Ontario public record GIS and the following sources:

1. Ontario Geological Survey 2010. Surficial Geology of Southern Ontario; Ontario Geological Survey, Miscellaneous Release--Data 128-REV.
2. Armstrong, D.K. and Dodge, J.E.P. 2007. Paleozoic Geology of Southern Ontario; Ontario Geological Survey, Miscellaneous Release-Data 219.
3. Gao, C., Shirota, J., Kelly, R. I., Brunton, F.R., van Haaften, S. 2006. Bedrock Topography and Overburden Thickness Mapping, Southern Ontario; Ontario Geological Survey, Miscellaneous Release-Data 207.
4. Ministry of Environment, Conservation and Parks (MECP). Map: Well records; Ontario Ministry of Environment, Conservation and Parks.

3 PHYSIOGRAPHIC SETTING & REGIONAL GEOLOGY

Chapman and Putnam (2007) indicates that the Site lies within the physiographic regions known as the South Slope at the northern portion of the Site (Orangeville-Brampton Railway (OBRY), Old School Road, Bovaird Drive) and the Peel Plain (Vodden Street, Kennedy Road and Queen Street) at the southern portion of the Site. The South Slope region extends from Niagara Escarpment to the Trent River which gently slopes downwards towards Lake Ontario. The upper overburden consists of lacustrine clay, moraine till and isolated silt and sand deposits, underlain by shale bedrock throughout this region. The Peel Plain characterized as an area of relatively low relief that features fine grained till underlain by Ordovician shale bedrock.

3.1 REGIONAL GEOLOGY

According to the Ontario Geological Survey mapping, as reproduced in Figure 3, the study area is dominated by glaciolacustrine-derived silty to clayey glacial till (geological unit 5D on Figure 3). This type of till is formed from sediments deposited in glacial lakes, often exhibiting a range of grain sizes from silt to clay. The presence of this till suggests the historical influence of glacial processes and subsequent lacustrine deposition within the study area.

Modern alluvium (geological unit 19 on Figure 3) has been deposited within the broad Etobicoke Creek floodplain, flanking Site area, which flows from the northwest to the southeast. Modern alluvium deposits are sedimentary accumulations actively deposited by fluvial processes within river channels, floodplains, and deltas. Composed of varying proportions of sands, silts, clays, gravels, cobbles and organic matter, these deposits reflect ongoing erosion upstream and the transport dynamics of rivers. They form through the continuous cycle of sediment erosion, transportation, and deposition, influenced by seasonal fluctuations in river discharge and interactions with slower-moving water bodies.

According to the Ontario Geological Survey mapping (Armstrong, 2007), the bedrock at the site is predominantly shale interbedded with limestone and siltstone of the Queenston Formation, as shown in Figure 4. The Queenston Formation is a red-brown mudstone to shale, interbedded with thin layers of limy, greenish-blue siltstone and limestone. The Queenston often lacks the fissility of a shale. The mudstone is typically a weak to medium strong rock (unconfined compressive strength of 5 to 50 MPa) under the International Society for Rock Mechanics strength convention, occasionally strong (50 – 100MPa).

3.2 GROUNDWATER WELL DATABASE

Regional groundwater flow moves from the northwest to the southeast towards Lake Ontario. Shallow groundwater flow is influenced by local topography, with recharge occurring in the upland areas and at the Canadian National Railway (CNR) crossing, and discharge occurring within the low-lying area of Etobicoke Creek.

Based on a review of the Ministry of the Environment, Conservation and Parks (MECP) water well database, over 450 water well records were identified within an approximately 250 m radius of the Site, with water levels reported varying as listed in Table 3.1 below. The approximate locations of these water wells near the proposed study area are shown in Figures 5 to 10. The well information is provided in Appendix A.

Table 3-1: Summary of groundwater level reported for each area in consideration

Area in Consideration for Study	Approx. groundwater Level (mbgs) reported in the Ministry of the Environment, Conservation and Parks (MECP) Water Well Database
Kennedy Road (Area 1A)	0.9m to 26.5m
Queen Street (Area 1B)	1.5m to 6.7m
Vodden Street (Area 1C)	1.5m to 14.6m
Orangeville – Brampton Railway (Area 1D)	0.1m to 54.9m
Bovaird Drive (Area 1E)	4.3m to 12.2m
Old School Road (Area 1F)	3.5m to 53.6m

The private wells that were purposed for water supply were found in over twenty-five (25) water well records, and the pumping water levels are ranging from 1.5mbgs to 42.7mbgs. More detailed study will be needed to assess if any of these wells remain in active use and might be interfered with as a result of localized construction dewatering operations.

3.3 ROUTE DESCRIPTION

The development surrounding the Study area is mostly heavily urbanized mixture of residential, commercial, and industrial areas. Commercial and industrial areas are primarily limited to the northeastern half of the alignment.

3.3.1 KENNEDY ROAD (AREA 1A)

Kennedy Road South, also referred to as Area 1A in this Study, pertains to the area from approximately 300m south of Hartford Trail to 100m north of Vodden Street East, where the trunk sewer system is planned to be installed. "Area 1A" is approximately 5.1km in length. Kennedy Road is a 4-lane undivided road with center turning lanes, constructed as an urban cross-section with catch basins and a concrete sidewalk. The road includes an overpass bridge for the Canadian National Railway (CNR) at a location approximately 165 meters south of Orenda Road.

3.3.1.1. Canadian National Railway (CNR)

A Canadian National Railway line is carried on an overpass bridge above Kennedy Road that is located approximately 165 meters south of Orenda Road. The elevation difference between Kennedy Road and the CNR track level is approximately 5 meters.

3.3.2 QUEEN STREET (AREA 1B)

Queen Street, also referred to as Area 1B in this Study, includes the area from Rutherford Road to Kennedy Road, where the trunk sewer is planned to be installed. Area 1B is approximately 0.9km in length. Queen Street is a 6-lane undivided road with center turning lanes, constructed as an urban cross-section with catch basins and a concrete sidewalk.

3.3.3 VODDEN STREET (AREA 1C)

Vodden Street, also referred to as Area 1C in this Study, includes the area from Kennedy Road to the Orangeville-Brampton Railway (OBRY), where the trunk sewer is planned to be installed. Area 1C is approximately 1.9km in length. Vodden Street is a 2-lane undivided road with and without center turning lanes, constructed as an urban cross-section with catch basins and a concrete sidewalk.

3.3.4 ORANGEVILLE-BRAMPTON RAILWAY (OBRY) (AREA 1D)

Orangeville-Brampton Railway (OBRY), also referred to as Area 1D in this Study, includes the area from Vodden Street to Old School Road, where trunk sewer is planned to be installed. Area 1D is approximately 9.5km in length. The OBRY is a former short line railway corridor acquired by Peel Region for conversion into a trail system.

3.3.5 BOVAIRD DRIVE (AREA 1E)

Bovaird Drive, also referred to as Area 1E in this Study, includes the area from OBRY to approximately 300m west of McLaughlin Road, where the trunk sewer is planned to be installed. Area 1E is approximately 1km in length. Bovaird Drive is a 6-lane divided road, constructed as an urban cross-section with catch basins and a concrete sidewalk.

3.3.6 OLD SCHOOL ROAD (AREA 1F)

Old School Road, also referred to as Area 1F in this Study, includes the area from OBRY to Hurontario Street, where the trunk sewer is planned to be installed. Area 1F is approximately 1.2km in length. Old School Road is a 2-lane undivided road, constructed as unurbanized cross-section with culverts.

4 GEO-HAZARDS & RECOMMENDATIONS FOR SITE INVESTIGATION

4.1 OVERVIEW OF SUBSURFACE CONDITIONS

The proposed trunk sewers will be installed along the aforementioned routes through a mostly heavily urbanized area with commercial and residential land use flanking the roadway.

Based on the available information at the time of writing this report, the subsurface conditions along the alignment are expected to include modern fill (as the area is a paved road or rail ballast, fill material would have been placed during its construction as well as for the bedding and backfilling of the multitude of existing wet and dry utilities), underlain by clayey or silty glacial till. Overconsolidated silty clay to clayey silt glacial till soils are typically favourable deposits for trenching with relatively moderate to low groundwater seepage rates. Occasional cobbles and boulders are expected to be present within the glacial till. The groundwater table is relatively shallow and lies a few metres below grade, generally mimicking the topography of the ground above. Perched groundwater would be expected to be present, trapped within bedding and backfill to existing utilities.

The bedrock of the Queenston Formation underlies the glacial till which consists of horizontally bedded shale / mudstone (weak to medium strong, locally strong), interbedded with limestone and siltstone (medium strong to very strong). The hard interbeds of siltstone and limestone can comprise 10% to 20% of the rock profile but typically not more than 10%. The shale is known to contain pockets of methane gas. The Queenston Formation has a high in-situ stress ratio and some swelling potential. Buried valleys and isolated shear zones have been intersected in the Queenston Formation in various areas of the Region of Peel; however, these features are not regionally mapped, and their distribution is poorly understood. There are preliminary indications of a bedrock valley along the Old School Road alignment. Therefore, the presence or absence of such features must be assessed by a thorough site investigation, typically conducted via seismic refraction survey along each full alignment.

The approximate ground surface, very approximate bedrock surface elevation and overburden thickness range are provided in Table 4.1 and are shown in profile in Figure 11-1 through 11-6.

Given the heavily urbanized nature of the roadways and railways, the extensive network of existing utilities in the right of way and rail corridor, the heavy vehicle traffic and rail traffic and without knowledge of the required hydraulic grades in most of the area, it seems very likely that the proposed trunk sewer may be constructed as a rock tunnel or a rock microtunnel in some or all areas of the alignment. It is not known if the trunk sewer will be constructed in open cut or in tunnel, or some combination thereof, but the latter scenario seems most likely. With this in mind, confirmation of the bedrock surface profile along the alignment is a critical issue, along with the characterization of overburden at the potential shaft locations and along any open-cut tie-ins. Some of the unique properties of the Queenston Formation must be carefully investigated through insitu and laboratory testing and these properties then need to be documented in a Geotechnical Data Report (GDR), then baselined in a Geotechnical Baseline Report (GBR).

Table 4-1: Summary of Approximate Ground Surface, Bedrock Surface Elevation and Overburden Thicknesses

Area in Consideration for Study	Approx. Ground Surface Elevation Range	Approx. Bedrock Surface Elevation Range	Approx. overburden thickness range
Kennedy Road (Area 1A)	El. 231m to El. 196m	El. 219m to El. 186m	4m to 13m
Queen Street (Area 1B)	El. 223m to El. 217m	El. 213m to El. 210m	7m to 11m
Vodden Street (Area 1C)	El. 230m to El. 216m	El. 218m to El. 214m	1m to 13m
Orangeville – Brampton Railway (Area 1D)	El. 268m to El. 220m	El. 249m to El. 214m	1m to 28m
Bovaird Drive (Area 1E)	El. 234m to El. 226m	El. 230m to El. 225m	1m to 5m
Old School Road (Area 1F)	El. 268m to El. 258m	El. 252m to El. 235m	15m to 34m

4.2 RECOMMENDATIONS FOR SITE INVESTIGATION

4.2.1 STAGE 1 SITE INVESTIGATION WORK

A *Stage 1* Site investigation for a rock tunnel/microtunnel would typically begin with an initial series of boreholes advanced at, say, approximately 200m to 250m intervals, plus at least one boring put down at potential shaft locations.

Typically, such borings would be sampled at continuous (0.76m intervals) through overburden (in conjunction with the Standard Penetration Test) and then core drilled through bedrock using double or triple tube HQ-sized core barrels, and the borings would be taken to at least 3 bore tunnel diameters (min. 6m) below proposed invert level. Given that the invert level could change at the early stages of design and the fact that the tunnel diameter could potentially increase (for example, if the bore were changed from microtunnel to conventional tunnel), conservatism is warranted in the setting of the borehole termination depths.

In consideration of the urbanized nature of the alignment, it is essential that the route be screened for historical landuse to identify past and present business operations that have the potential to have impacted soil, bedrock or overburden environmental quality. At the Stage 1 investigation stage, this work could be in the form of an APU (Assessment of Past Uses) as required under O.Reg. 406/19. Stage 1 boring locations should be added at locations where higher risk land use (such as past or present fuelling stations, automotive repair facilities, dry cleaners, etc.) is identified. Environmental soil quality testing is also required at each shaft location.

Since rock material mined from a tunnel is rendered soil-like during the excavation process, it should be evaluated as a soil material under the Excess Soil Regulation. Pulverized samples of rock core must be

tested under O.Reg 406/19. Previous studies have revealed that naturally occurring elevated levels of certain parameters further underscoring the need to test and document the baseline chemistry of bedrock samples. Detailed knowledge of such potential exceedances will be of benefit in determining appropriate disposal fate or beneficial reuse options (such as cement clinker) for rock spoils.

Installation of monitoring wells, screened both in the overburden and in the bedrock is recommended as part of Stage 1 site investigation work, with emphasis on installations located at the potential shaft sites and at locations identified as potentially contaminating activities in the APU. Monitoring of groundwater levels and fluctuations in groundwater level should be made in these wells at regular intervals over the course of one year, preferably using auto-reading transducers. Single well response testing should be carried out within each monitoring well in order to estimate the formation hydraulic conductivity. Each monitoring well should be also be sampled and tested for environmental quality relative to the prevailing storm and sanitary Sewer Use By Laws. The monitoring wells, along with the boreholes (between sampling intervals), should be screened for methane gas and hydrogen sulphide. In later Stage 2 site investigations, the type and concentration of gas should be determined using Summa collection canisters sealed onto dedicated collection ports on the wellhead of selected monitoring wells.

Stage 1 site investigations should include a laboratory testing program that includes index testing of soil samples (moisture content determinations, grain size analyses, Atterberg consistency limits) and some preliminary bedrock testing (unconfined compressive strength, Point Load Index strength, indirect tensile strength, slake durability, Cerchar Abrasiveness, mineralogy). More advanced testing, such as rock swelling potential (vertical and horizontal null swell, semi-confined swell, free swell, calcite content) can be reserved for Stage 2 investigations, provided the 100 day testing period is available in the project schedule.

A Stage 1 tunnel and shaft impact assessment is normally undertaken using simple closed form solutions, empirical estimations of zone of influence and ground displacement. Any potential impacts predicted due to temporary construction dewatering would be additive to these predictions. On the basis of stage 1 settlement estimates, a decision can be made as to whether more advanced Stage 2 analyses, using numerical modelling methods, are warranted.

At the culmination of Stage 1 site investigations, a preliminary GDR is prepared along with a preliminary Geotechnical Memorandum for Design (GMD). A preliminary Hydrogeological Investigation report and Assessment Report (HIAR), along with the APU should be produced. These documents will ultimately be superceded by, and updated by, revised GDR, GMD and HIAR reports prepared following completion of the Stage 2 site investigation work.

4.2.2 STAGE 2 SITE INVESTIGATIONS

Stage 2 Site investigations are normally directed at filling in geographical gaps in borehole coverage and to hone in on key issues affecting tunneling, shaft sinking, related temporary works (temporary dewatering, support of excavation), disposal of excess soils, rock and pre-treatment requirements for discharged groundwater.

The Stage 1 boring spacings are typically cut in half in Stage 2 (i.e., borings will now be spaced at a maximum of 100m to 125m intervals plus additional borings at shafts and at Potentially Contaminating Activity sites).

At this stage, the tunnel's horizontal alignment and vertical profile are assumed to be fixed, and shaft sites are identified. As such, the insitu and laboratory testing programs can be targeted to the specific tunnel horizon and shaft locations.

Shaft site temporary easements and allocated laydown areas can be investigated once the property limits have been defined. Pre-construction Phase 1 and Phase 2 ESA's should be done within these temporary construction compound sites.

Bedrock secondary permeability testing (Lugeon, or double packer water pressure acceptance testing) is conducted at shaft locations and within the tunnel horizon at selected locations in order to better predict tunnel and shaft seepage/dewatering rates. Monitoring wells that were identified in Stage 1 to have groundwater quality exceedances of the Sewer Use By-Law criteria should be purged, developed and resampled both for un-filtered and field-filtered samples to evaluate the effect of turbidity on groundwater chemistry.

Site-wide soil and pulverized rock testing should be conducted consistent with the minimum sample testing numbers as dictated by O.Reg. 406/19 based on the anticipated shaft/tunnel excavated volume.

If localized soil contamination was identified in Stage 1 borings, horizontal and vertical delineation of soil contamination should be carried out in Stage 2.

If the Stage 1 geophysical survey had identified anomalies that might be consistent with a buried valley, bedrock surface irregularity, or shear zone, supplementary geophysical surveys may be warranted, possibly combined with additional boreholes specific to the zone of anomalies.

Use of inclined boreholes may be warranted in bedrock to better assess fracture orientation, frequency and aperture. Inclined borings should be logged using the acoustic and optical televiewer in order to provide quantitative data on the discontinuity characteristics and enable preparation of discontinuity stereonets. These borings would typically be situated at several key shaft sites.

Additional geotechnical rock laboratory testing would be undertaken as part of Stage 2 work in order to provide a more statistically valid data set for key parameters such as UCS, indirect tensile strength, hard layer thickness distribution and percentages, abrasivity, plasticity of shale fines, swell potential, etc. These expanded data sets would be plotted as histograms and will be evaluated alongside regional data sets and previous experience when setting GBR Baselines.

Reports that will be prepared (or updated) once the stage 2 investigations are complete will include the revised GDR, HIAR, Environmental Soil Characterization Report and GMD. The preparation of the Geotechnical Baseline report (GBR) will likely be the final deliverable following Stage 2 work.

5 GENERAL COMMENTS AND LIMITATIONS OF REPORT

This is a high level, broad brush desktop geotechnical study intended to be used only in the relative assessment of candidate alignments. This report does not present design or construction recommendations. Detailed design stage site investigation work (boreholes, test pits, monitoring well installations, laboratory testing) and associated geotechnical analyses and reporting are required. This report in no way obviates the need for such future work.

This report is intended solely for the Client named. The material in it reflects our best judgment in light of the information available to EnVision at the time of preparation. Unless otherwise agreed in writing by EnVision Consultants Ltd. it shall not be used to express or imply warranty as to the fitness of the property for a particular purpose. No portion of this report may be used as a separate entity, it is written to be read in its entirety.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. EnVision Consultants Ltd. accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

We accept no responsibility for any decisions made or actions taken as a result of this report unless we are specifically advised of and participate in such action, in which case our responsibility will be as agreed to at that time.

5.2 QUALIFIER

EnVision prepared this report solely for the use of the intended recipient in accordance with the professional services agreement. In the event a contract has not been executed, the parties agree that

the EnVision General Terms and Conditions, which were provided prior to the preparation of this report, shall govern their business relationship.

The report is intended to be used in its entirety. No excerpts may be taken to be representative of the findings in the assessment. The conclusions presented in this report are based on work performed by trained, professional and technical staff, in accordance with their reasonable interpretation of current and accepted engineering and scientific practices at the time the work was performed.

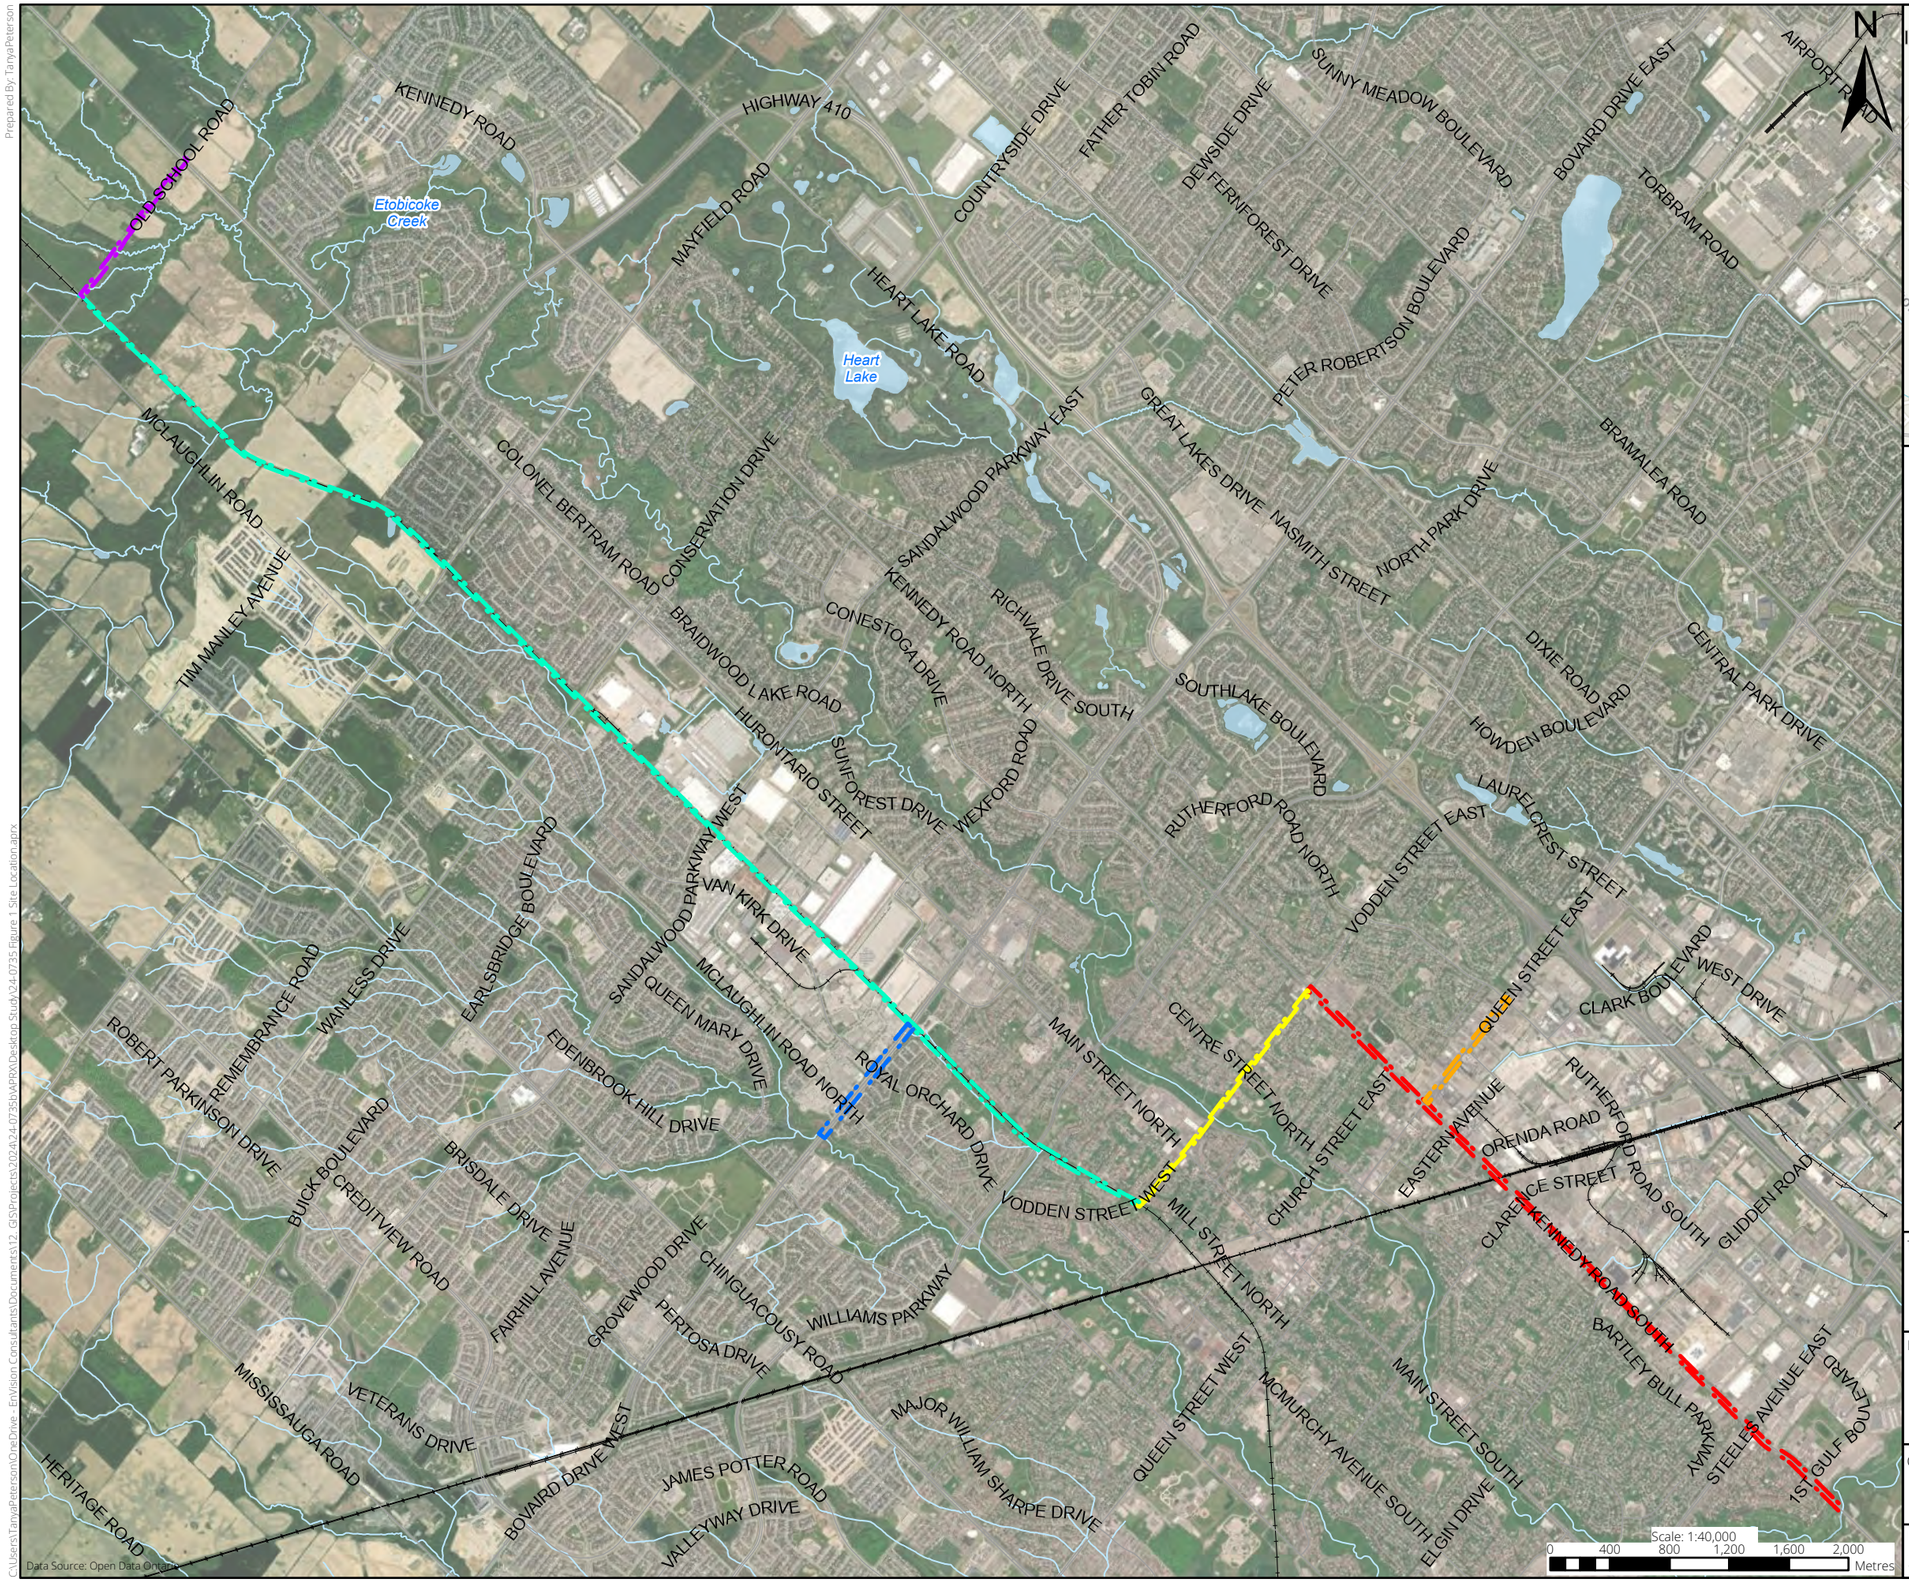
The content and opinions contained in the report are based on the observations and/or information available to EnVision at the time of preparation, using investigation techniques and engineering analysis methods consistent with those ordinarily exercised by EnVision and other engineering/scientific practitioners working under similar conditions, and subject to the same time, financial and physical constraints applicable to this project.

EnVision disclaims any obligation to update this report if, after the date of this report, any conditions appear to differ significantly from those presented in this report; however, EnVision reserves the right to amend or supplement this report based on additional information, documentation or evidence.

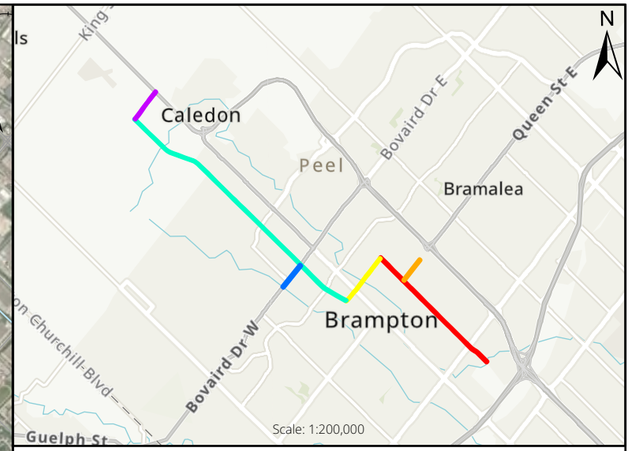
EnVision makes no other representations whatsoever concerning the legal significance of its findings. The intended recipient is solely responsible for the disclosure of any information contained in this report. If a third party makes use of, relies on, or makes decisions in accordance with this report, said third party is solely responsible for such use, reliance or decisions. EnVision does not accept responsibility for damages, if any, suffered by any third party as a result of decisions made or actions taken by said third party based on this report.

EnVision has provided services to the intended recipient in accordance with the professional services agreement between the parties and in a manner consistent with that degree of care, skill and diligence normally provided by members of the same profession performing the same or comparable services in respect of projects of a similar nature in similar circumstances. It is understood and agreed by EnVision and the recipient of this report that EnVision provides no warranty, express or implied, of any kind. Without limiting the generality of the foregoing, it is agreed and understood by EnVision and the recipient of this report that EnVision makes no representation or warranty whatsoever as to the sufficiency of its scope of work for the purpose sought by the recipient of this report.

In preparing this report, EnVision has relied in good faith on information provided by others, as noted in the report. EnVision has reasonably assumed that the information provided is correct and EnVision is not responsible for the accuracy or completeness of such information.



Unless otherwise agreed in writing by EnVision, the Report shall not be used to express or imply warranty as to the suitability of the site for a particular purpose. EnVision disclaims any responsibility for consequential financial effects on transactions or property values, or requirements for follow-up actions /or costs.



This limitations statement is considered an integral part of this report.
