**IN THIS ISSUE:**
- NACI UPDATE: Tdap Immunization in Pregnancy
- Easter Monday – Breastfeeding Clinic Services
- Easter Monday – Vaccine Pick-up

**FROM:**
Jessica Hopkins, MD, MHSc, CCFP, FRCPC
Medical Officer of Health

### Key Messages:
- NACI recommends immunization with Tdap (Adacel® or Boostrix®) vaccine with *every* pregnancy between 27-32 weeks of gestation.
- On April 2, breastfeeding clinic services will be available at the Meadowvale location only.
- On April 2, vaccine pick-up will only be available at: 7120 Hurontario, Meadowvale and Fairview.

### NACI UPDATE: Tdap Immunization in Pregnancy

**Updated Recommendation:**

- Immunization with Tdap (Adacel® or Boostrix®) vaccine should be provided with *every* pregnancy between 27-32 weeks of gestation.
  - May be administered irrespective of previous immunization history due to rapid waning of maternal antibodies, and;
  - May be administered from 13 weeks gestation up to the time of delivery based on unique patient considerations such as risk of preterm birth.

**Rationale:**
- Infants who have not initiated vaccination or completed the primary series of pertussis immunization are at highest risk for pertussis complications, including hospitalization and death.
- Immunization in pregnancy is safe and provides protection to infants until they are able to receive the pertussis vaccine at two months of age.

**NOTE:** Only one adult dose of Tdap (≥ 18 years of age) is currently publicly funded in Ontario, and this has not changed.

### Easter Monday – Breastfeeding Clinic Services

On Monday, April 2, Breastfeeding Clinic services will be available at the Meadowvale location only. To book an appointment call 905-799-7700, or walk-in for services from 8:30 a.m. to 4:30 p.m.

### Easter Monday – Vaccine Pick-up

Monday, April 2, vaccine pick-up will only be available at:
- 7120 Hurontario
- Meadowvale
- Fairview

If you have questions about vaccine ordering and/or pick up, call the Vaccine Order Desk at 905-791-7800 ext. 6404.
