Peel Regional Paramedic Services

## Automated External Defibrillators (AED) Registration Information

The AED Registry is an optional repository of publicly and privately available AEDs (Automated External Defibrillators). The registry is maintained by Peel Regional Paramedic Services and accessed by 911 communications personnel when someone calls 911 for a cardiac-related emergency. 911 communications personnel access the Computer Aided Dispatch system to identify the nearest AED and provide instructions on how to retrieve it when they are publicly available.

### ***Why Should I Register My Automated External Defibrillators (AED)?***

During a sudden cardiac arrest, every second counts. For every 1 minute delay in defibrillation, survival rate decreases by 10%. Having your AED registered increases public access to these life-saving devices and can help save lives in your community and workplace.

### ***The Benefits of Registering Your AED?***

- a) When a registered AED is used during a cardiac emergency, Peel Regional Paramedic Services will assist you and your organization through the next steps. This includes providing you with free replacement pads and other common AED accessories used while acting to save a life. We also follow up with those involved in the incident and answer any questions they may have about their experience and involvement.
- b) If your organization is hosting a large event or offsite gathering, registered AED owners can borrow an AED for these events free of charge.
- c) If your AED cannot be serviced onsite after being used, we will provide a loaner until your registered AED is rescue ready.
- d) You will receive an information tag to attach to your AED that provides information on “Next Steps” after the AED has been used.
- e) Registration includes notifying the 911 call centre of your AED’s availability.

### ***How Much Does Registering Cost?***

There is **no cost** associated with registering your AED.

### ***What Are My Responsibilities?***

You are required to complete maintenance checks as per the AED manufacturer, and ensure that your AED device is rescue ready at all times. This includes replacing expired equipment associated with your AED. Peel Regional Paramedic Service only replaces pads after an AED has been used for a sudden cardiac arrest.

### ***How Do I Update My Registration Information?***

Changes can be made by submitting this registration form with the most current information.
