

### Sanitary Backwater Valve Rebate Program Check list

I have a general understanding of what a sanitary backwater valve does. I also understand the ongoing maintenance requirements of a sanitary backwater valve

I have confirmed my eligibility for the rebate program by calling the Region of Peel at 905-791-7800, ext. 4409

I have had a licensed plumber (preferably with a business licence with the city of Brampton, Mississauga or the Town of Caledon) do a thorough assessment of my home's plumbing and provided me with an overall plumbing recommendation that includes the following:

The plumber has confirmed that there are no cross-connections within my sanitary sewer system and a sanitary backwater valve is appropriate for installation in my home

I have discussed with the plumber and chosen whether the sanitary backwater valve should be installed inside or directly outside my home

The plumber has also reviewed and confirmed that all my home's downspouts can be disconnected (or are already disconnected)

If any of the downspouts cannot be disconnected, I have discussed with the plumber if additional measures may be needed to protect my home from flooding

I have filled out a downspout disconnection exemption form from the Region of Peel and have received their confirmation that my exemption has been approved

I have checked that the sanitary backwater valve to be installed is a "normally open type" and adheres to the Ontario building code

I have applied for a building permit from my municipality (the city of Brampton, Mississauga or the Town of Caledon)

I have had all of my home's downspouts disconnected (or have an approved exemption form)

I have had my sanitary backwater valve installed

I have had a municipal building inspector inspect and sign off on my building permit and asked the inspector to include the backwater valve number on the permit

I have filled out and submitted the Backwater Valve Rebate Program application form from the Region of Peel, including the signed building permit

Once your application is received, the Region of Peel will verify that your downspouts have been disconnected and all requirements have been met before approving your application. Should you require more information about any of them items on the check list, please visit [peelregion.ca/flooding](http://peelregion.ca/flooding)
